The Canadian edition of Accounting for Managers: Interpreting Accounting Information for Decision-Making builds on the success of the original textbook that was published in the United Kingdom. This book was motivated by a need for a “decision-focused” accounting textbook for both MBA and undergraduate programs. The title of the book emphasizes the focus on accounting to meet the needs of managers. The material contained in the book stresses the interpretation (rather than the construction) of accounting information as well as a critical (rather than unthinking) acceptance of the underlying assumptions behind accounting. It is suitable for postgraduate and undergraduate students who are undertaking courses in accounting that do not lead to professional accreditation, and to practicing non-financial managers who need a better understanding of the role of accounting in their organizations. This Canadian edition book has been adapted to include materials, examples and case studies with a Canadian focus. Part I provides a discussion of financial accounting, with particular focus on international financial reporting standards and practices. Part II concentrates on management accounting information for planning, decision-making and control, while Part III provides the supporting information including relevant readings that demonstrate some current research and literature in management accounting.

Industrial ecology is a concept that has emerged in response to growing public concern about the impact of industry on the environment. In this framework the natural flow (or circulation) of materials and energy that takes place in biological ecosystems becomes a model for more efficient industrial "metabolism." What industrial ecology is and how it may be applied to corporate environmentalism are the subject of The Industrial Green Game. This volume examines industrial circulation of materials, energy efficiency strategies, "green" accounting, life-cycle analysis, and other approaches for preventing pollution and improving performance. Corporate leaders report firsthand on "green" efforts at Ciba-Geigy, Volvo, Kennecott, and Norsk Hydro. And an update is provided on the award-winning industrial symbiosis project in Kalundborg, Denmark. The Industrial Green Game looks at issues of special concern to business, such as measuring and shaping public perceptions and marketing "green" products to consumers. It offers discussions of the appropriate roles of government and private business.

Values and Ethics in Social Work Practice

Accounting for Managers explains how accounting information is used by non-financial managers. The book emphasises the interpretation, rather than the construction, of accounting information and encourages a critical, rather than unthinking acceptance, of the underlying assumptions behind accounting. Techniques to uncover and avoid accounting frauds and scams Inflated profits . . . Suspicious write-offs . . . Shifted expenses . . . These and other dubious financial maneuvers have taken on a contemporary twist as companies pull out the stops in seeking to satisfy Wall Street. Financial Shenanigans pulls back the curtain on the current climate of accounting fraud. It presents tools that anyone who is potentially affected by misleading business valuations from investors and lenders to managers and auditors can use to research and read financial reports, and to identify early warning signs of a company's problems. A bestseller in its first edition, Financial Shenanigans has been thoroughly updated for today's marketplace. New chapters, data, and research reveal contemporary "shenanigans" that have been known to fool even veteran researchers.

Fundamentals of Business (black and White)

We have spent a great deal of time on the continued development of accounting and auditing standards, which are used as a primary component of corporate reporting, to reach today's financial reporting framework. However, is it possible to say that, currently, financial statements provide full and prompt disclosure? Or will they still be useful as a primary element with their current structures in corporate reporting? Undoubtedly, we are deeply concerned about these issues in recent times. This volume contains chapters to discuss the today's and tomorrow's accounting and corporate reporting phenomena in a comprehensive and multidimensional way. Therefore, this book is organized into six sections: "Achieving Sustainability through Corporate Reporting", "International Standardization", "Financial Reporting Quality", "Accounting Profession and Behavioral Aspects", "Public Sector Accounting and Reporting", and "Managerial Accounting".

This book contains a collection of research papers on accounting information systems including their strategic role in decision processes, within and between companies. An accounting system is a complex system composed of a mix of strictly interrelated elements such as data, information, human resources, IT tool, accounting models and procedures. Accounting information systems are often considered the instrument by default for accounting automation. This book aims to sketch a clear picture of the current state of AIS research, including design, acceptance and reliance, value-added decision making, interorganizational links, and process improvements. The contributions in this volume emphasize that AIS has grown into a powerful strategic tool. The book provides evidence for this observation by examining a wide range of current issues ranging from theory development in AIS to practical applications of accounting information systems. In particular it focuses on themes of growing interest in the realm of XBRL and Financial Reporting, Management Information Systems, IT/IS Audit and IT/IS Compliance. The book will be of interest to financial and managerial accountants and IT/IS practitioners, including information systems managers and consultants.
