An Introduction to Work and Organizational Psychology

Most consultation courses in school psychology focus heavily on theoretical models of consultation and associated intervention procedures. Little time is devoted to developing communication and process skills. Yet these process skills are key to properly identifying student problems and selecting appropriate interventions. Without skillfully conducted consultations, implementation and evaluation of an intervention can be minimal. This book is designed to help students develop the process skills needed to become effective school consultants in consultee-centered consultation, with special emphasis on the instructional consultation model. The authors address specific skills and issues faced by novice consultants and documents how they worked through particular issues that are likely to occur in school consultation practice.

Consultation in Psychology

Originally termed "Industrial-Organizational Psychology (I/O)," practitioners of this specialty emanate from varying backgrounds in business-psychology related fields. Although it was one of the "original four" specialties of the American Board of Professional Psychology established in 1947, the domain of contemporary I/O professional practice can best be thought of as a "hybrid" across multiple traditions. For this volume in the series, Jay Thomas describes this particular hybrid model. The original board reflecting the specialty of I/O psychology (i.e., the American Board of Industrial and Organizational Psychology) within the greater organization of the American Board of Professional Psychology (which at the time of this writing encompasses 13 differing specialty boards in professional psychology), reconstituted itself in 2005 to be the "American Board of Organizational and Business Consulting (OBC) Psychology." This name change was made in order to best capture the notion that specialists in this area can be educated and trained (and practice) in related, but somewhat differing traditions. Readers interested in this specialty area within psychology will find this text invaluable as the most current description of the competencies thought important to help define the OBC psychologist. Series in Specialty Competencies in Professional Psychology Series Editors Arthur M. Nezu and Christine Maguth Nezu. As the field of psychology continues to grow and new specialty areas emerge and achieve recognition, it has become increasingly important to define the standards of professional specialty practice. Developed and conceived in response to this need for practical guidelines, this series presents methods, strategies, and techniques for conducting day-to-day practice in any given psychology specialty. The topical volumes address best practices across the functional and foundational competencies that characterize the various psychology specialties, including clinical psychology, cognitive and behavioral psychology, school psychology, geropsychology, forensic psychology, clinical neuropsychology, couples and family psychology, and more. Functional competencies include common practice activities like assessment and intervention, while foundational competencies represent core knowledge areas such as ethical and legal issues, cultural diversity, and professional identification. In addition to describing these competencies, each volume provides a definition, description, and development timeline of a particular specialty, including its essential and characteristic pattern of activities, as well as its distinctive and unique features. Written by recognized experts in their respective fields, volumes are comprehensive, up-to-date, and accessible. These volumes offer invaluable guidance to not only practicing mental health professionals, but those training for specialty practice as well.

Psychological Consultation

"The contemporary world-of-work makes demands upon the field of career development and vocational psychology to ensure that theories and practices retain their relevance amidst the complexity of work and learning in people's lives. Social Constructionism is the emerging paradigm that can reformulate theories and practices of career development that have come before. Social Constructionism opens new perspectives and raises questions about phenomena that have captured the imagination of scholars and practitioners for a century. In this fourth book in the Sense Career Development Series, a host of international authors open the window of Social Constructionism to reveal the challenges that lay ahead in the next generation of research and practice. This little book is ideal for the graduate scholar, researcher, and seriously curious practitioner who seek to understand Social Constructionism, the questions it raises, and how those questions may be answered. Readers will be challenged to think hard, review their assumptions, and see the world of work and learning anew. The rewards are worth the effort."

Social Constructionism in Vocational Psychology and Career Development

Clinical supervision and consultation have long been considered integral elements of training and maintaining competency for psychologists and other mental health professionals. One of the primary responsibilities of supervisors is to help with the professional socialization of supervisees; instilling in them the relevant ethical principles and standards is a significant component of this charge. Although students may have considerable knowledge from graduate courses in professional ethics, it is usually in the context of a practicum or internship that the nuances and complexities of these issues begin to emerge. Supervisors must be present and attentive in order to capture and fully utilize those proverbial 'teachable moments' in which the applications of ethical principles and standards might be recognized and internalized. The potential for misunderstanding and misapplication is significant for novice professionals, and it is supervisors who can provide the guidance necessary to protect the welfare of clients and educate supervisees. Even experienced professionals are vulnerable to ethical errors caused by other factors such as mismanaged countertransference, lack of knowledge about evolving standards, and personal problems that compromise objectivity and effectiveness. ""The Ethics of Supervision and Consultation: Practical Guidance for Mental Health Professionals"" represents the confluence of ethics with supervision and consultation. Supervision and consultation are treated as discrete areas of specialization, and ethics codes and specialty guidelines are analyzed in terms of their applications to this work. Supervisors and consultants are provided with both theoretical and practical strategies for incorporating ethical principles into their work.

Destined to Lead

Why do our organizations so often seem to be less than the sum of their parts? What undermines effectiveness and morale, and gets in the way of achieving what we set out to do? The Unconscious at Work, Second Edition draws on a body of thinking and practice which has developed over the past 70 years, often referred to as 'the Tavistock approach' or 'systems-psychodynamics'. All the contributors are practising consultants who draw on this framework, bringing it alive and making it useful to any reader – manager, leader or consultant, regardless of whether they have any prior familiarity with the underlying concepts – who is curious about what might be driving the puzzling or stressful situations they find in their workplace. The First Edition was addressed to people working in 'the human services': health, social care and education. Since it was published in 1994, there has been growing interest in the business world, and in understanding more about

the 'irrational' side of organizational life. Therefore, this Second Edition includes an entirely new section where the key ideas are revisited and illustrated with case studies from a wide range of business organizations, from large corporations to start-ups and family businesses. The aim, however remains the same: to enlarge readers' existing sense-making 'tool-kits' so that they can look at themselves and their organizations with fresh eyes, deepening the emotional intelligence they bring to bear on the challenges they face and providing new possibilities for action. The Unconscious at Work, Second Edition is for managers, leaders, consultants, and anyone working in organizations who has been puzzled, disturbed or challenged by their experiences at work.

Health Psychology Consultation in the Inpatient Medical Setting

Originally published in 1950, the need for a small standard text on basic principles of personality structure and development had been very apparent to teachers of psychology for some time. There were many books illustrating specialized or applied aspects of the psychology of personality – such as abnormal psychology, educational psychology, child psychology, mental measurement, vocational guidance, etc. – but lacking was a treatment of personality study as pure psychology, concentrating on the fundamentals. The aim of this title was therefore to bring the general problems of personality description and development, normal and abnormal, into a single perspective and to integrate the principle fields of observation in clear cut generalizations.

Data Driven

Less than 30% of psychologists report familiarity with transgender and gender nonconforming (TGNC) clients' needs. The clients, in turn, report a lack of support in their gender journeys. There is clearly a large gap in knowledge, skill, and competence in this area of practice. This clinical guide fills that gap by providing mental health practitioners with an affirmative approach that emphasises a collaborative partnership guided by client-driven goals. An expert panel of contributors teaches readers strategies for working with a diverse array of TGNC clients, including adolescents, older adults, parents, and people of colour. Client factors, including sexual orientation, religious and spiritual beliefs, and traumatic experiences, are also given special attention. Readers will learn how to address the impact of the injustices TGNC people face in everyday life, work with clients' strengths to enhance their resilience and coping skills, and advocate for their rights to obtain mental and physical health services. They will also learn how to negotiate complex issues, such as interdisciplinary care, ethical and legal obligations, and gender-affirming surgeries and medications. The chapter authors draw from evidence-based theories and APA's ""Guidelines for Psychological Practice With Transgender and Gender Nonconforming People (PDF, 462KB)"" to help readers meet the latest standards of care.
