Archaeology Matters

Archaeology of the Chinese Fishing Industry in Colonial Victoria

Magical, spooky and mysterious: welcome to the House on Hoarder Hill When Hedy and Spencer start receiving messages on dusty picture frames, Christmas at their grandfather's spooky house turns into a mission to solve the mystery of their grandmother's disappearance. What is their magician grandfather not telling them? With the help of a (talking) mounted stag head, an (also talking) bear rug, and other (currently) disembodied spirits, and against the resistance of gargoyles and ravens, Hedy and Spencer set out to find the truth.

Introduction to Leadership

"A thoughtful and sophisticated account of a notoriously complicated and controversial period." —R. I. Moore, Times Literary Supplement History remembers Attila, the leader of the Huns, as the Romans perceived him: a savage barbarian brutally inflicting terror on whoever crossed his path. Following Attila and the Huns from the steppes of Kazakhstan to the court of Constantinople, Christopher Kelly portrays Attila in a compelling new light, uncovering an unlikely marriage proposal, a long-standing relationship with a treacherous Roman general, and a thwarted assassination plot. We see Attila as both a master warrior and an astute strategist whose rule was threatening but whose sudden loss of power was even more so. The End of Empire is an original exploration of the clash between empire and barbarity in the ancient world, full of contemporary resonance.

Archaeology of the Southwest, Third Edition

Conservation is a core value for most archaeological societies. It is highlighted in their codes of ethics, statements of mission, and governance. In recognition of this, the World Archaeological Congress, with the Getty Conservation Institute and a consortium of other conservation organizations, brought together scholars working throughout the globe to discuss vital issues that affect archaeological heritage today. This volume presents the proceedings of the Conservation Theme at the Congress, held in Washington, D.C., June 22–26, 2003. Among the topics discussed are: Innovative Approaches to Policy and Management of Archaeological Sites; Finding Common Ground: The Role of Stakeholders in Decision Making; Archaeology and Tourism: A Viable Partnership?; Preserving the Cultural Heritage of Iraq and Afghanistan; Archaeology and Conservation in China Today; and Managing Archaeological Sites and Rock Art Sites in Southern Africa. These proceedings should do much to promote and strengthen the relationship between the disciplines of conservation and archaeology.

Archaeology

In *Masculinity and Dress in Roman Antiquity*, Olson argues that clothing functioned as part of the process of communication by which elite male influence, masculinity, and sexuality were made known and acknowledged, and furthermore that these concepts interconnected in socially significant ways. This volume also sets out the details of masculine dress from literary and artistic evidence and the connection of clothing to rank, status, and ritual. This is the first monograph in English to draw together the myriad evidence for male dress in the Roman world, and examine it as evidence for men's self-presentation, status, and social convention.

Introducing Archaeology

The image of Old West saloons as sites of violence and raucous entertainment has been perpetuated by film and legend, but the true story of such establishments is far more complex. In *Boomtown Saloons*, archaeologist Kelly J. Dixon recounts the excavation of four historic saloon sites in Nevada's Virginia City, one of the West's most important boomtowns, and shows how the physical traces of this handful of disparate drinking places offer a new perspective on authentic life in the mining West. During the second half of the nineteenth century, the Comstock Lode's mineral wealth attracted people from all over the world. At its peak, Virginia City had a cosmopolitan population of over 20,000 people. Like people everywhere, they sought to pass their leisure time in congenial company, often in one or another of the four saloons studied here. Dixon's account of the role these four establishments played in the social and economic life of Virginia City offers keen insight into the businesses and people who made up the backdrop of a mining boomtown. The saloons in this study were quieter than legend would have us believe; they served relatively distinct groups and offered their customers a place of refuge, solidarity, and social contact with peers in a city where few people had longtime ties or initially any close contacts. *Boomtown Saloons* also offers an equally vivid portrait of the modern historical archaeologist who combines time-honored digging, reconstruction, and analysis methods with such cutting-edge technology as DNA analysis of saliva traces on a 150-year-old pipestem and

chemical analysis of the residue in discarded condiment bottles. The book is illustrated with historical photographs and maps, as well as photographs of artifacts uncovered during the excavations of the four sites. Dixon's sparkling text and thoughtful interpretation of evidence reveal an unknown aspect of daily life in one of the West's most storied boomtowns and demonstrate that, contrary to legend, the traditional western saloon served an vital and complex social role in its community. Available in hardcover and paperback.

The Fifth Beginning

History is recorded in many ways. According to author James Deetz, the past can be seen most fully by studying the small things so often forgotten. Objects such as doorways, gravestones, musical instruments, and even shards of pottery fill in the cracks between large historical events and depict the intricacies of daily life. In his completely revised and expanded edition of *In Small Things Forgotten*, Deetz has added new sections that more fully acknowledge the presence of women and African Americans in Colonial America. New interpretations of archaeological finds detail how minorities influenced and were affected by the development of the Anglo-American tradition in the years following the settlers' arrival in Plymouth, Massachusetts in 1620. Among Deetz's observations: Subtle changes in building long before the Revolutionary War hinted at the growing independence of the American colonies and their desire to be less like the British. Records of estate auctions show that many households in Colonial America contained only one chair--underscoring the patriarchal nature of the early American family. All other members of the household sat on stools or the floor. The excavation of a tiny community of freed slaves in Massachusetts reveals evidence of the transplantation of African culture to North America. Simultaneously a study of American life and an explanation of how American life is studied, *In Small Things Forgotten*, through the everyday details of ordinary living, colorfully depicts a world hundreds of years in the past.

Essex Archaeology and History

During the 1850s and 1860s, Chinese immigrants played a major role in the development of the fishing industries in Australia. Prior to their involvement, the industry was hampered by the problems posed by the transportation of fish to market. It was common for whole catches of fish to putrefy before they could reach their destination. The influx of Chinese gold miners, who relied on fish as a dietary staple, increased the demand that prompted the creation of many Chinese fish-curing establishments. Chinese fish curers in colonial Australia fished but also purchased large quantities of fish, creating a new and reliable market for European fishermen. Fish-curing businesses supplied their compatriots on the goldfields with fresh and cured fish. These establishments, which made sums of money far greater than any European fishing operation, provided hundreds of jobs for both European and Chinese Australians in the fishing industry. Very few pieces of documentary evidence, along with archaeological records from one colonial-period Chinese fish-curing camp in Victoria, remain. They reveal a fascinating story of how Chinese fish curers successfully dominated Australia's fishing industry; how they lived, worked, organised themselves, participated in colonial society, and the reasons why they suddenly disappeared.

The British National Bibliography

Since its inception, paleoanthropology has been closely wedded to the idea that big-game hunting by our hominin ancestors arose, first and foremost, as a means for acquiring energy and vital nutrients. This assumption has rarely been questioned, and seems intuitively obvious—meat is a nutrient-rich food with the ideal array of amino acids, and big animals provide meat in large, convenient packages. Through new research, the author of this volume provides a strong argument that the primary goals of big-game hunting were actually social and political—increasing hunter's prestige and standing—and that the nutritional component was just an added bonus. Through a comprehensive, interdisciplinary research approach, the author examines the historical and current perceptions of protein as an important nutrient source, the biological impact of a high-protein diet and the evidence of this in the archaeological record, and provides a compelling reexamination of this long-held conclusion. This volume will be of interest to researchers in Archaeology, Evolutionary Biology, and Paleoanthropology, particularly those studying diet and nutrition.

World Prehistory and Archaeology

Archaeology is perceived to study the people of long ago and far away. How could archaeology matter in the modern world? Well-known archaeologist Jeremy Sabloff points to ways in which archaeology might be important to the understanding and amelioration of contemporary problems. Though archaeologists have commonly been associated with efforts to uncover cultural identity, to restore the past of underrepresented peoples, and to preserve historical sites, their knowledge and skills can be used in many other ways. Archaeologists help Peruvian farmers increase crop yields, aid city planners in reducing landfills, and guide local communities in tourism development and water management. This brief volume, aimed at students and other prospective archaeologists, challenges the field to go beyond merely understanding the past and actively engage in making a difference in the today's world.

Children of the Fifth Sun

"I have seen yesterday. I know tomorrow." This inscription in Tutankhamun's tomb summarizes *The Fifth Beginning*. Here, archaeologist Robert L. Kelly explains how the study of our cultural past can predict the future of humanity. In an eminently readable style, Kelly identifies four key pivot points in the six-million-year history of human development: the emergence of technology, culture, agriculture, and the state. In each example, the author examines the long-term processes that resulted in a definitive, no-turning-back change for the organization of society. Kelly then looks ahead, giving us evidence for what he calls a fifth beginning, one that started

about AD 1500. Some might call it “globalization,” but the author places it in its larger context: a five-thousand-year arms race, capitalism’s global reach, and the cultural effects of a worldwide communication network. Kelly predicts that the emergent phenomena of this fifth beginning will include the end of war as a viable way to resolve disputes, the end of capitalism as we know it, the widespread shift toward world citizenship, and the rise of forms of cooperation that will end the near-sacred status of nation-states. It’s the end of life as we have known it. However, the author is cautiously optimistic: he dwells not on the coming chaos, but on humanity’s great potential.

Using accessible language and examples, the casebook provides the foundation that students, public administrators and policy analysts need to interpret the rules and regulations that support our legal system.
