As climate change and extreme weather events increasingly threaten traditional landscapes and livelihoods of entire communities the need to study its impact on human migration and population displacement has never been greater. The Atlas of Environmental Migration is the first illustrated publication mapping this complex phenomenon. It clarifies terminology and concepts, draws a typology of migration related to environment and climate change, describes the multiple factors at play, explains the challenges, and highlights the opportunities related to this phenomenon. Through elaborate maps, diagrams, illustrations, case studies from all over the world based on the most updated international research findings, the Atlas guides the reader from the roots of environmental migration through to governance. In addition to the primary audience of students and scholars of environment studies, climate change, geography and migration it will also be of interest to researchers and students in politics, economics and international relations departments.

## **Library of Congress, with Bibliographical Notes**

An Atlas and Survey of Latin American History makes the geography, the demography, and the political, social, and economic history of the region easily accessible in clearly drawn black-and-white maps and accompanying text. Fully up to date, it provides a topical overview of Latin American development from earliest times to the present day, bringing to light patterns of continuity and change. The Atlas is ideal for beginning through advanced college students, area specialists, and secondary school AP students. It demonstrates the close linkages between Latin American history, culture, economic development, and geographic realities. Each entry and map is accompanied by a brief, carefully selected bibliography.
