## **Aircraft Weight and Balance Handbook**

### **Safety Recommendation**

This training guide diminishes the dangers and doubles the thrill--and safety--of flying single-engine aircraft at high altitudes in mountainous regions. Logically organized by phases of flight--from preflight preparation to landings--the author combines statistics, techniques, and examples of actions (correct and incorrect) that real pilots have taken in actual flight scenarios. \* Details training that offsets mountain flying mistakes \* Describes the effects of altitude on pilots and aircraft \* Outlines cold weather operations and precautions \* Includes search and rescue operation procedures \* Reviews take-off conditions from airport mountains

CBIP is the complete reference and buying guide to English-language Canadian books currently in print; consequently, the Author and Title Index, Subject Index and microfiche editions are indispensable to the book profession. With submissions from both small and large publishers, CBIP provides access to titles not listed anywhere else. Containing more than 48,000 titles, of which approximately 4,000 have a 2001 imprint, the Author and Title Index is extensively cross-referenced. The Subject Index lists the titles under 800 different subject categories. Both books offer the most complete directory of Canadian publishers available, listing the names and ISBN prefixes, as well as the street, e-mail and web addresses of more than 4,850 houses. The quarterly microfiche service provides updated information in April, July and October. CBIP is constantly referred to by order librarians, booksellers, researchers, and all those involved in book acquisition. In addition, CBIP is an invaluable record of the vast wealth of publishing and writing activity in the scientific, literary, academic and arts communities across Canada. A quarterly

The National Transportation Safety Board has maintained a significant interest in commuter airline safety since the Board's creation in 1967. The Safety Board's involvement with commuter safety is reflected in accident reports, safety recommendations, and special studies which cover the period since 1970. In 1979, the Safety Board designated 14 CFR 135 enforcement and surveillance as a fiscal year 1980 safety objective. In October 1979, after a series of commuter accidents, the Board undertook a special study of commuter airline safety, and in January 1980, conducted a 4-day public hearing on the subject. This study includes a review and analysis of the commuter airline industry accident history since 1972; an analysis of the predominant

safety issues which affect the commuter airline industry; and a review of the relationship of the Federal regulators to the commuter airlines. The Safety Board developed the basis of the study from its 1972 special study of air taxis, the Board's accident statistics, and accident investigation experience, and from an extensive field survey. The study discusses the operational, maintenance, training, and regulatory areas of the industry and analyzes safety deficiencies. The Board concludes that the basis to sound commuter airline safety must come from a coordinated program which includes the implementation of the new 14 CFR 135, Federal Aviation Administration surveillance and enforcement efforts, and a strong safety-oriented posture by commuter managers. Coupled with this program must be the permanent recognition by the Federal Aviation Administration of the commuter industry as an airline industry rather than as a segment of general aviation. Finally, the Safety Board makes a number of safety recommendations to the FAA designed to enhance the commuter airline industry
