'Transactions involving intellectual property whether by way of out-and-out assignment or by one of the myriad variants of licensing which are possible, are really really important – they help the world of business go round. But such transactions can be complex with things like national rules preventing alienation getting in the way of bargains people wish to make. So it is quite astonishing how sparse the literature on the subject is – particularly literature taking a comparative view. This book is perhaps the very first of its kind, taking as it does perspectives from the major legal systems of the world. Moreover its distinguished authors have not written in a technical or abstruse way – as academics (and some judges) can all too easily do. Far from it. This book is readable – and anyone concerned with intellectual property licensing should read it and will find it a pleasure to do so. They will also learn a lot about some of the pitfalls and bear-traps to be found around the world. At UCL we have recognised the importance of this subject. This book will be on our students' reading list.' – The Rt. Hon. Sir Robin Jacob, UCL Faculty of Laws, UK 'IP licensing underpins the information economy. This impressive book brings together leading academic lawyers and practitioners from a range of key jurisdictions to explore a number of major current issues. Whether read cover-to-cover as a compilation of current best practice or used as a true reference guide, the Research Handbook on Intellectual Property Licensing is a must have for anyone seeking to capture value from intangible assets.' – From the foreword by James E. Malackowski The Research Handbook on Intellectual Property Licensing explores the complexities of intellectual property licensing law from a comparative perspective through the opinions of leading experts. This major research tool analyses the features of specific types of licensing agreements and also addresses other practical issues which apply across different types of licensing transactions, such as the treatment of licensing in bankruptcy and the use of arbitration for solving licensing disputes. The Handbook ultimately provides a scholarly contribution to the development of global intellectual property licensing policies. Including transversal and comparative analysis, this Handbook will appeal to intellectual property licensing practitioners, lawyers and intellectual property and contract law academics.

Intellectual Property in the Global Marketplace, Country-by-Country Profiles

2002 Intellectual Property Law Update

Millions of computer users regularly bind themselves to software license terms with the click of a mouse, usually without reading anything but the word "agree." Licenses for software as diverse as Microsoft Windows and Linux, and terms of use for websites such as Facebook, are all subject not only to intellectual property and commercial law, but also to the private law of the license, which comes in many forms, each with its advocates. Microsoft, for example, maintains that its proprietary model gives users the rights they need while creating the incentives that have made the United States the global software leader, while Richard Stallman - creator of the GNU General Public License and author of a number of free software programs - asserts that proprietary licensing enables software companies to "hoard" software they should be sharing. In *The Software License Unveiled*, Douglas Phillips looks at both of these extremes and questions how these proliferating but largely unread license terms affect access to software, one of the economy's most valuable resources. While highlighting the obvious divergences, he makes the more illuminating case that most current models - spanning the spectrum from proprietary to free - have one key feature in common: to an increasing extent, each license model extends, modifies, or displaces public law that would otherwise apply. Unlike books that advocate one form of licensing or another, this one reframes the debate to propose that going forward a key challenge for lawyers, scholars, policymakers, and the public is to consider whether "legislation by license" should be the means for controlling software access.
