The Art of Law

The contributions to this volume were written by historians, legal historians and art historians, each using his or her own methods and sources, but all concentrating on topics from the broad subject of historical legal iconography. How have the concepts of law and justice been represented in (public) art from the Late Middle Ages onwards? Justices and rulers had their courtrooms, but also churches, decorated with inspiring images. At first, the religious influence was enormous, but starting with the Early Modern Era, new symbols and allegories began appearing. Throughout history, art has been used to legitimise the act of judging, but artists

have also satirised the law and the lawyers; architects and artisans have engaged in juridical and judicial projects and, in some criminal cases, convicts have even been sentenced to produce works of art. The book illustrates and contextualises the various interactions between law and justice on the one hand, and their artistic representations in paintings, statues, drawings, tapestries, prints and books on the other.

For those who wish to learn more about the relevance of reported measurement properties, the text focuses on how this knowledge can assist clinical decision-making. Additionally, the book reviews a range of measurements in neurological rehabilitation as well as mobility, fatigue, physical activity and patient satisfaction.

The name Etsy has over the years become synonymous with online sales and

purchasing. Since its advent in 2005, the company, its customer base as well as its products and services have increased exponentially. The company, which has its base in New York, was created to serve as a virtual marketplace for helping the artistic to advertise and sell their products. The company now owns many online and wholesale stores, expanded into many other countries and boasts profits more than US2 billion. As an online marketplace, Etsy attracts many entrepreneurs who use the space as a base for the company. Despite, its online nature, as a business, they are also liable for taxes and deductions annually. Sellers who work through Etsy as their platform have many taxable deductions that apply to them.

Modern music notation developed out of the so-called square notation and this out of the Latin neumes. The question of where these neumes came from has long been the subject of scholarly debate. As the author demonstrated in his three-volume $\langle \text{math} \rangle$Universale Neumenkunde published in German in 1970, there is a very close relationship between the Paleo-Byzantine notation and the Latin neumes. Although the study aroused a great deal of dispute, more recent studies have revealed that the relevance of the $\langle \text{math} \rangle$Neumenkunde remains essentially unchallenged after 40 years. Those path-breaking research results on the relationship of the Greek and Latin notational systems are now available for the first time in a completely revised and augmented English translation.

Moody's Bond Record

The Medieval Book of Birds

Spacewalkers enjoy a view of Earth once reserved for Apollo, Zeus, and other denizens of Mt. Olympus. During humanity's first extravehicular activity (EVA), Alexei Leonov floated above Gibraltar, the rock ancient seafarers saw as the gateway to the great unknown Atlantic. The symbolism was clear - Leonov stepped past a new Gibraltar when he stepped into space. More than 32 years and 154 EVAs later, Jerry Linenger conducted an EVA with Vladimir Tsiibliyev as part of

International Space Station Phase I. They floated together above Gibraltar. Today the symbolism has new meaning - humanity is starting to think of stepping out of Earth orbit, space travel's new Gibraltar, and perhaps obtaining a new olympian view - a close-up look at Olympus Mons on Mars. Walking to Olympus: An EVA Chronology chronicles the 154 EVAs conducted from March 1965 to April 1997. It is intended to make clear the crucial role played by EVA in the history of spaceflight, as well as to chronicle the large body of EVA "lessons learned." Russia and the U.S. define EVA differently. Russian cosmonauts are said to perform EVA any time they are in vacuum in a space suit. A U.S. astronaut must have at least his head outside his spacecraft before he is said to perform an EVA. The difference is based in differing spacecraft design philosophies. Russian and Soviet spacecraft have always had a specialized airlock through which the EVA cosmonaut egressed, leaving the main habitable volume of the spacecraft pressurized. The U.S. Gemini and Apollo vehicles, on the other hand, depressurized their entire habitable volume foregress. In this document, we apply the Russian definition to Russian EVAs, and the U.S. definition to U.S.EVAs. Thus, for example, Gemini 4 Command Pilot James McDivitt does not share the honor of being first American spacewalker with Ed White, even though he was suited and in vacuum when White stepped out into space. Non-EVA spaceflights are listed in the chronology to provide context and to display the large number of flights in which EVA played a role. This approach also makes apparent significant EVA gaps -for example, the U.S. gap between 1985 and 1991 following the Challenger accident.

This book uses examples from experimental studies to illustrate theoretical investigations, allowing greater understanding of hydrogen bonding phenomena. The most important topics in recent studies are covered. This volume is an invaluable resource that will be of particular interest to physical and theoretical chemists, spectroscopists, crystallographers and those involved with chemical physics.
