Glaucome Primitif À Angle Ouvert

This is the first comprehensive assessment of pension systems in the Middle East and North Africa. While other regions—Central Asia, Eastern Europe, and Latin America, in particular—have been actively introducing reforms to their pension systems, Middle East and North African countries have lagged behind. This is explained, in part, by the common belief that, because demographics remain favorable—the countries are young and the labor force is expanding rapidly—financial problems are far in the future; as a result, pension reform does not have to be a priority in the broader policy agenda. However, the authors show that aging is not the only factor behind a financial crisis; the problem is the generosity of the current schemes. Moreover, badly designed benefit formulas and eligibility conditions introduce unnecessary economic distortions and make the systems vulnerable to adverse distributional transfers. The book does not present a general model that could solve the problems of all pension systems in Middle East and North Africa countries. Instead the authors focus on outlining a framework for guiding discussions on pension reform and making objective policy choices. This assessment will be useful for policy makers and government officials involved in pension reform in the Middle East and North Africa region.

Safety and Ethics in Healthcare: A Guide to Getting it Right

A single coherent source of information on the various interlinking domains of patient safety, litigation and ethical behaviour, based on accounts of real-life situations and intended for all healthcare students, specialists and administrators.

The Definitive, Fully Updated Guide to Separation Process Engineering—Now with a Thorough Introduction to Mass Transfer Analysis Separation Process Engineering, Third Edition, is the most comprehensive, accessible guide available on modern separation processes and the fundamentals of mass transfer. Phillip C. Wankat teaches each key concept through detailed, realistic examples using real data—including up-to-date simulation practice and new spreadsheet-based exercises. Wankat thoroughly covers each of today's leading approaches, including

flash, column, and batch distillation; exact calculations and shortcut methods for multicomponent distillation; staged and packed column design; absorption; stripping; and more. In this edition, he also presents the latest design methods for liquid-liquid extraction. This edition contains the most detailed coverage available of membrane separations and of sorption separations (adsorption, chromatography, and ion exchange). Updated with new techniques and references throughout, Separation Process Engineering, Third Edition, also contains more than 300 new homework problems, each tested in the author's Purdue University classes. Coverage includes Modular, up-to-date process simulation examples and homework problems, based on Aspen Plus and easily adaptable to any simulator Extensive new coverage of mass transfer and diffusion, including both Fickian and Maxwell-Stefan approaches Detailed discussions of liquid-liquid extraction, including McCabe-Thiele, triangle and computer simulation analyses; mixer-settler design; Karr columns; and related mass transfer analyses Thorough introductions to adsorption, chromatography, and ion exchange—designed to prepare students for advanced work in these areas Complete coverage of membrane separations, including gas permeation, reverse osmosis, ultrafiltration, pervaporation, and key applications A full chapter on economics and energy conservation in distillation Excel spreadsheets offering additional practice with problems in distillation, diffusion, mass transfer, and membrane separation

Among glass craftsmen active in the 1st century A.D., the most famous and gifted was Ennion, who hailed from the coastal city of Sidon in modern Lebanon. Ennion's glass stood out for its quality and popularity. His products are distinguished by the fine detail and precision of their relief decoration, which imitates designs found on contemporaneous silverware. This compact, but thorough volume examines the most innovative and elegant known examples of Roman mold-blown glass, providing a uniquely comprehensive, up-to-date study of these exceptional works. Included are some twenty-six remarkably preserved examples of drinking cups, bowls, and jugs signed by Ennion himself, as well as fifteen additional vessels that were clearly influenced by him. The informative texts and illustrations effectively convey the lasting aesthetic appeal of Ennion's vessels, and offer an accessible introduction to an ancient art form that reached its apogee in the early decades of the Roman Empire.

Trade Policy Review - Togo

This volume addresses the issue of biological invasions from both an ecological and economic perspective, providing an in-depth evaluation of the science and its implications for managing the causes and consequences of one of the most pressing environmental issues facing humans today.

The Devil's Gardens

This publication aims to provide a valuable and practical tool for those countries where court decisions in the copyright domain are scarce or non-existent - either because copyright law is a fairly new phenomenon or because legislation has not been extensively applied. To that effect, this publication examines a carefully selected number of court decisions illustrating general principles of copyright law, drawn from common law, civil law and the legislative systems of Arab countries. As the basic principles illustrated here are to a large extent commonly shared, many of the cases presented have a wider relevance, going beyond the confines of the legal system of which they form a part. L'objet du présent recueil est d'offrir un outil précieux et commode aux pays dont la jurisprudence en matière de droit d'auteur est restreinte ou inexistante, soit parce que le droit d'auteur est une réalité relativement nouvelle pour eux, soit parce que la législation en vigueur dans ce domaine n'a pas été largement appliquée. À cette fin, le présent ouvrage expose un certain nombre de décisions de justice, soigneusement sélectionnées, qui illustrent les principes généraux du droit d'auteur et qui émanent de la common law, du droit civil et des systèmes législatifs des pays arabes. Compte tenu de la valeur quasi universelle de ces principes fondamentaux, la pertinence des cas présentés va bien souvent au-delà des limites du système juridique dont ils relèvent.

Principles of Copyright Law - Cases and Materials

This book is concerned with the steady state hydraulics of natural gas and other compressible fluids being transported through pipelines. Our main approach is to determine the flow rate possible and compressor station horsepower required within the limitations of pipe strength, based on the pipe materials and grade. It addresses the scenarios where one or more compressors may be required depending on the gas flow rate and if discharge cooling is needed to limit the gas temperatures. The book is the result of over 38 years of the authors' experience on pipelines in North and South America while working for major energy companies such as ARCO, El Paso Energy, etc.

This book analyses the supposed erosion of the authority of EU law from various perspectives: legislation, jurisprudence of national supreme and constitutional courts, enforcement of Single Market rules, of EMU rules and of the rule of law. It discusses the interdependence between the perceived legitimacy of the European project and respect for the authority of EU law.

The World Investment Report series provides the latest data and analysis foreign direct investment (FDI) and other activities of transnational corporations, as well as the policies to regulate them at the national and international levels. It aims to analyse the cross-border activities of translational corporations and related policy measures with a view to helping policymakers formulate appropriate policy responses. The special theme of the 2016 Report examines the ownership of multinational enterprises and the control of affiliates, analyzing related key and emerging policy issues. These include entry conditions for foreign investors and treatment of established investment, as well as investment promotion and facilitation. Bringing together an innovative analysis of complex multinational ownership structures and relevant policy practices, the focus of the report is on the effectiveness of existing policies for distinguishing between "domestic" and "foreign" companies in a globalized economy. The report provides policymakers a new framework for handling ownership issues in 21st century investment policymaking.

The 7 Principles of Conflict Resolution

7 Principles of Conflict Resolution is the go-to resource for conflict and dispute resolution, whether you're new to the subject or an experienced practitioner. This book sets out 7 principles to create and maintain successful, workable relationships through effective conflict resolution. It provides you with the tools to resolve or mediate difficult conversations and conflict situations whatever the situation or context and help other people do the same to transform professional and personal relationships permanently. Crucially, it allows you to achieve results without the need to go to court or litigation even when conflict has escalated or is entrenched. The 7 principles to effective conflict resolution will enable you to understand, discuss and resolve problematic situations whether as an individual or organisation: 1. Acknowledge the Conflict 2. Take Control: building resolution focussed conversations 3. Construct a Resolution with the Conflict Resolution Framework 4. Enable others' Success 5. Build the Resolution Culture 6. Walk the Walk 7. Engage the safety net: When informal resolution doesn't work 7 Principles of Conflict Resolution will guide you through the process from beginning to end, with a framework for conversations and tools, techniques and strategies that work.

There are also templates, exercises and worksheets that you can use to support conversations.

The Ultimate Sniper

Concentrates on the broad field of multidimensional chromatography and its applications in various areas, including pharmaceutical, industrial, environmental, biological and petroleum. Presents information for using multidimensional chromatography in the analytical laboratory. Contains invaluable information put together from the experience and research activities of the authors including Keith Bartle - a pioneer in multidimensional chromatography. First book to discuss all multidimensional techniques Covers a subject area that is part of the exploding field of hyphenated techniques Includes a general introduction to all areas of the subject followed by applications

Le pouvoir discrétionnaire du Procureur de la Cour pénale internationale

For decades knowledge of the 1961 massacre of Algerian demonstrators by the Paris police was suppressed. This study investigates the roots of this violence within the colonial system and how the event was covered up until it resurfaced after the 1980s to become one of the most controversial issues in contemporary French politics.

The linguistic integration of migrants affects every aspect of settling in a new country (employment, health, etc.). The aim of this collection of texts is to propose a number of specific measures member states can take to help adult migrants become acquainted with the language of the host country. The main focus is on organising language courses that meet migrants' real communication needs. It is not enough for authorities simply to consider the technical aspects of such courses, they should also design and conduct them in accordance with the fundamental values of the Council of Europe. A number of issues concerning the linguistic integration of adult migrants are presented here, beginning with the notion of linguistic integration itself. Family reunion, the nature of citizenship and the function of language tests, among others, are dealt with from the point of view of language and language use. Readers are invited to reflect on the type of language competences that need to be acquired as well as an appropriate use of the Common European Framework of Reference for Languages. The collection also sets

out approaches and instruments designed to assist in implementing effective policies.

The Solid Waste Dilemma

Ciarcia's Circuit Cellar

This book is dedicated to improving healthcare through reducing delays experienced by patients. With an interdisciplinary approach, this new edition, divided into five sections, begins by examining healthcare as an integrated system. Chapter 1 provides a hierarchical model of healthcare, rising from departments, to centers, regions and the “macro system.” A new chapter demonstrates how to use simulation to assess the interaction of system components to achieve performance goals, and Chapter 3 provides hands-on methods for developing process models to

identify and remove bottlenecks, and for developing facility plans. Section 2 addresses crowding and the consequences of delay. Two new chapters (4 and 5) focus on delays in emergency departments, and Chapter 6 then examines medical outcomes that result from waits for surgeries. Section 3 concentrates on management of demand. Chapter 7 presents breakthrough strategies that use real-time monitoring systems for continuous improvement. Chapter 8 looks at the patient appointment system, particularly through the approach of advanced access. Chapter 9 concentrates on managing waiting lists for surgeries, and Chapter 10 examines triage outside of emergency departments, with a focus on allied health programs. Section 4 offers analytical tools and models to support analysis of patient flows. Chapter 11 offers techniques for scheduling staff to match patterns in patient demand. Chapter 12 surveys the literature on simulation modeling, which is widely used for both healthcare design and process improvement. Chapter 13 is new and demonstrates the use of process mapping to represent a complex regional trauma system. Chapter 14 provides methods for forecasting demand for healthcare on a region-wide basis. Chapter 15 presents queueing theory as a method for modeling waits in healthcare, and Chapter 16 focuses on rapid delivery of medication in the event of a catastrophic event. Section 5 focuses on achieving change. Chapter 17 provides a diagnostic for assessing the state of a hospital and using the state assessment to select improvement strategies. Chapter 18 demonstrates the importance of optimizing care as patients transition from one care setting to the next. Chapter 19 is new and

shows how to implement programs that improve patient satisfaction while also improving flow. Chapter 20 illustrates how to evaluate the overall portfolio of patient diagnostic groups to guide system changes, and Chapter 21 provides project management tools to guide the execution of patient flow projects.

The theory of abstract groups comes into play in an astounding number of seemingly unconnected areas like crystallography and quantum mechanics, geometry and topology, analysis and algebra, physics, chemistry and even biology. Readers need only know high school mathematics, much of which is reviewed here, to grasp this important subject. Hundreds of problems with detailed solutions illustrate the text, making important points easy to understand and remember.

This book covers liquid pipeline hydraulics as it applies to transportation of liquids through pipelines in a single phase steady state environment. It will serve as a practical handbook for engineers, technicians and others involved in design and operation of pipelines transporting liquids. Currently, existing books on the subject are mathematically rigorous, theoretical and lack practical applications. Using this book, engineers can better understand and apply the principles of hydraulics to their daily work in the pipeline industry without resorting to complicated formulas and theorems. Numerous examples from the author's real life experience are included to illustrate application of pipeline hydraulics.

'The image I have is a kid on a country lane on a Saturday afternoon herding his family cattle, meaning no harm to anybody and putting one step wrong. It's one thing to die in combat, it's one thing to die defending land, but it's another thing to die tending cattle on a Saturday afternoon and we want a world where that doesn't happen' - Michael Ignatieff

During the twentieth century a landmine plague raged across the globe. It began on the battlefields of two world wars, it gathered momentum in Korea and Vietnam and then spread like wildfire throughout the developing world. The Devil's Gardens is the definitive story of the landmine. It is the story of the development and proliferation of a weapon of terror. It is also the story of suffering and devastation, and a worldwide crusade to put an end to the

curse of landmines forever. The issues surrounding landmines and their continued use are controversial. Drawing on a wide range of distinguished interviewees and the authors' first-hand experiences in severely mine-affected countries, *The Devil's Gardens* look at all sides of the landmine story.

Lying at the centre of a tumultuous region, the Central African Republic and its turbulent history have often been overlooked. Democracy, in any kind of a meaningful sense, has eluded the country. Since the mid-1990s, army mutinies and serial rebellion in CAR have resulted in two major successful coups. Over the course of these upheavals, the country has become a laboratory for peacebuilding initiatives, hosting a two-decade-long succession of UN and regional peacekeeping, peacebuilding and special political missions. Drawing together the foremost experts on the Central African Republic, this much-needed volume provides the first in-depth analysis of the country's recent history of rebellion, instability, and

international and regional intervention.

Le glaucome est une maladie dégénérative du nerf optique qui entraîne une perte progressive de la vision commençant tout d'abord en périphérie et progressant graduellement vers le centre. Cette maladie est souvent associée à une pression intra-oculaire (PIO) élevée qui comprime et endommage les fibres du nerf optique et de la rétine. Dans d'autres cas, malgré une PIO normale, une circulation sanguine inadéquate entraîne la mort (nécrose) des cellules du nerf optique et de la rétine. La perte de vision associée au glaucome est permanente et irréversible. Sans traitement, cette maladie peut mener jusqu'à la cécité. Le glaucome est une maladie fréquente puisqu'il atteint 2 % de la population totale en France. Ce sujet de santé publique fera l'objet du rapport annuel de la SFO en 2014. Le rapport abordera: - les bases fondamentales et cliniques; - la prise en charge thérapeutique; - les aspects socio-économiques et juridiques; - le dépistage et les incidences en terme de santé publique.

In the Middle Ages, rolls were ubiquitous as a writing support. While scholars have long examined the texts and images on rolls, they have rarely taken the manuscripts themselves into account. This volume readdresses this imbalance by focusing on the materiality and various usages of rolls in late medieval England and France. Researchers from England, France, Germany and Singapore demonstrate in 11 contributions how this approach can increase our understanding of the rolls and their contents, as well as the contexts in which they were produced and used.

A comprehensive and up to date survey of the science and technology of polymeric dispersions. The book discusses the kinetics and mechanisms of polymerization in dispersed media, examines the processes controlling particle morphology, presents both off-line and on-line methods for the characterization of polymer colloids, considers reactor engineering and control, and covers a wide variety of applications, such as latex paint formulations, encapsulation of inorganic particles, reactive latexes, adhesives, paper coating, and biomedical and pharmaceutical applications. Audience: A valuable resource for scientists and engineers, academic and industrial, who are involved in the manufacture or application of polymeric dispersions.

The Strip Method Design Handbook is a thorough guide to the use of the strip method, developed by Arne Hillerborg, for design of reinforced concrete slabs. The strip method of design is relevant to many types of slabs including rectangular slabs with all sides supported and regular flat slabs with cantilevering parts. The author discusses unevenly distributed loads, concentrated loads and the influence of openings as well as joist floors and prestressed slabs. This book provides a practical guide for the designer demonstrating how to use the strip method in a wide range of design situations specific to a slab type. The method is illustrated throughout with numerical examples and the analysis is rationalised with approximations and formulas for the calculation of design moments.

Designers' Guide to Eurocode 3

This book answers the question of how exactly property price indexes should be constructed. The formation and collapse of property bubbles has had a profound impact on the economic administration of many nations. The property price bubble that began around the mid-1980s in Japan has been called the 20th century's

biggest bubble. In its aftermath, the country faced a period of long-term economic stagnation dubbed the "lost decade." Sweden and the United States have also faced collapses of property bubbles in the 20th and early 21st centuries, respectively. It has been pointed out that the "information gap" that existed between policy-making authorities and the property (including housing) and financial markets was a problem. In 2009, the IMF proposed the creation of a housing price index to the G20 in order to fill this information gap, and the proposal was adopted. Furthermore, in 2011, it was suggested that the next economic crisis would be caused by a bubble in commercial property prices, and it was decided to create a commercial property index as well. This book provides practical examples of how the theory of property price indexes can be applied to the issues of property as a non-homogenous good and a technological and environmental change.
