"Take Linthicum's warnings seriously . . . he's been through the fire!"-Rusty Weston, Senior Editor, PC Week. A renowned client/server expert provides state-of-the-art techniques for building client/server and intranet applications. In this valuable guide, client/server guru David Linthicum shows developers how to use cutting-edge development tools and techniques to build real-life business applications. The book provides step-by-step procedures for creating these applications, explains how to select the software and hardware that's right for your projects, and even provides guidelines on estimating project costs. This unique book covers client/server and network architectures, types of middleware, and development tools so you can determine the right approach to building a client/server or intranet system. Linthicum assesses dozens of tools by type, features, and specialization and provides detailed, step-by-step guidelines for creating the perfect solution. You'll learn how to form and test your final system and find expert tips every developer and application architect needs to work more effectively. In addition to providing recommendations, warnings, and case studies, Dave covers: * The latest client/server development tools and methods * Two-tier, three-tier, and multi-tier client/server development models and related technologies * Repository-driven development, programming languages, database

connectivity, and middleware * The use of CORBA-compliant ORBs and the inner workings of Microsoft Active Platform * Next-generation application partitioning tools like Forte and Dynasty.

Intranets

The design of information literacy instruction and the building of it are two distinct skillsets and processes; yet all too often everything gets mashed together, creating needless confusion and stress. In this book Turnbow, an instructional designer, and Roth, an instructional technologist, suggest a better way to organize the work.

Explains what intranets are and how to incorporate them into an organization

Managing Internet and Intranet Technologies in Organizations: Challenges and Opportunities

For the past decade, e-mail has been the preferred method of internal communication in libraries. However, relying on email for organizational knowledge management seems a bit like storing birth certificates, car titles, and deeds in a pile of junk mail: the important documents are lost amongst other items of only minimal or fleeting importance. A successful intranet can provide a secure place for information exchange and storage; however, in order to be successful, a library intranet must be easy to use, have the functionality desired by its users, and be

integrated into the daily workflows of all library staff. Accomplishing this can be challenging for web librarians. The book covers, among other topics, third-party hosting; the use of freely available blog and wiki software for internal staff communication; and developing library intranets in ColdFusion, Microsoft SharePoint, and the open source Drupal content management system (CMS). More importantly, the authors examine in detail the human factors, which, when not thoroughly addressed, are more often the cause for a failed intranet than the technology platform. This book was published as a special issue of the Journal of Web Librarianship.

A pronounced move from print subscriptions to electronic resources in all types of libraries has fundamentally impacted the library and its users. With the influx of resources such as e-journals; e-books; index, abstract, and/or full-text databases; aggregated databases; and others, the shift to electronic resources is rapidly changing library operational and organizational procedures. *Electronic Resource Management in Libraries: Research and Practice* provides comprehensive coverage of the issues, methods, theories, and challenges connected with the provision of electronic resources in libraries, with emphasis on strategic planning, operational guidelines, and practices. This book primarily focuses on management practices of the life-cycle of commercially acquired electronic resources from selection and

ordering to cataloging, Web presentation, user support, usage evaluation, and more.
