During the past 20 years, the field of mechanical engineering has undergone enormous changes. These changes have been driven by many factors, including: the development of computer technology worldwide competition in industry improvements in the flow of information satellite communication real time monitoring increased energy efficiency robotics automatic control increased sensitivity to environmental impacts of human activities advances in design and manufacturing methods These developments have put more stress on mechanical engineering education, making it increasingly difficult to cover all the topics that a professional engineer will need in his or her career. As a result of these developments, there has been a growing need for a handbook that can serve the professional community by providing relevant background and current information in the field of mechanical engineering. The CRC Handbook of Mechanical Engineering serves the needs of the professional engineer as a resource of information into the next century.

This handbook provides a comprehensive and thorough overview of technology for pollution control processes. It will be of interest to those engineers, consultants, educators, architects, planners, government officials, industry executives, attorneys, students, and others concerned with solving environmental problems. The pollution control processes are organized into chapters by broad problem areas, and appropriate technology for decontamination, destruction, isolation, etc., for each problem area is presented. Since many of these technologies are useful for more than one problem area, a specific technology may be included in more than one chapter, modified to suit the specific considerations involved. The pollution control processes described are those that are actively used today, as

well as those innovative and emerging processes that have good future potential. An important feature of the book is that advantages and disadvantages of many processes are cited. Also, in many cases, regulatory-driven trends are discussed which will impact the technology used in the future.
