Fundamentals of Sleep Medicine E-Book

Now in its Sixth Edition, this comprehensive text provides pertinent information on medical diagnosis, therapy, lab tests, and health maintenance essential to decision making in primary care medicine. Every chapter has been revised to include more images, tables, and bulleted lists. Practical recommendations that incorporate the best available evidence, expert consensus guidelines, and clinical judgement are listed in bulleted items at the end of every chapter. The dermatology section has been extensively revised for this edition by a new section editor. A companion Website offers the fully searchable text and an image bank. This is the tablet version which does not include access to the supplemental content mentioned in the text.

Evaluation of the Psychiatric Patient

From a hospital admittance to discharge to outpatient rehabilitation, Spinal Cord Injuries addresses the wide spectrum of rehabilitation interventions and

administrative and clinical issues specific to patients with spinal cord injuries. Comprehensive coverage includes costs, life expectancies, acute care, respiratory care, documentation, goal setting, clinical treatment, complications, and activities of daily living associated with spinal cord patients. In addition to physical therapy interventions and family education components, this resource includes content on incidence, etiology, diagnosis, and clinical features of spinal cord injury. Case Studies with clinical application thinking exercises help you apply knowledge from the book to real life situations. Thoroughly referenced, evidence-based content provides the best evidence for treatment based on the most current research. Tables and boxes throughout each chapter organize and summarize important information for quick reference. Clinical Note boxes provide at-a-glance access to helpful tips. Over 500 clinical photos, line drawings, radiographs, and more bring important concepts to life. Highly respected experts in spinal cord injury rehabilitation, editors Sue Ann Sisto, Erica Druin, and Martha Sliwinski, provide authoritative guidance on the foundations and principles of practice for spinal cord injury. Companion DVD includes video clips of the techniques described throughout the book that demonstrate how to apply key concepts to practice.

Evaluation of Sleep Complaints, An Issue of Sleep Medicine Clinics,

One of the largest patient populations seen by neuropsychologists are older adults suffering from problems associated with aging. Further, the proportion of the population aged 65 and above is rising rapidly. This book provides a guide to neuropsychological clinicians increasingly called upon to assess this population. The book details in a step-by-step fashion the phases and considerations in performing a neuropsychological assessment of an older patient. It covers procedural details including review of patient's medical records, clinical interview, formal testing, interpretation of test scores, addressing referral questions, and preparing an evaluation report. Key Features * Outlines a clear, logical approach to neuropsychological evaluation * Provides specific clinical practice guidelines for each phase of the evaluation * Integrates clinical practice with up-to-date research findings * Recommends specific tests for evaluating older adults * Details how to interpret test findings and identify the patient's neuropsychological profile * Illustrates important points with examples and case materials, many neuropathologically-confirmed * Includes forms useful in clinical practice

Cardiology for the Primary Care Physician

Dr. Clete Kushida has assembled an expert panel of authors focused on Sleep Complaints. Emergency Medicine

A few months before the final manuscript of this book was sent to the publisher,

Dr. Karl A. Menninger died, shortly before his ninety seventh birthday. Thus, when I sat down to write this preface, he was very much on my mind. I remembered that it had been almost forty years since he wrote *A Manual for Psychiatric Case Study*, not one of his well-known but probably the most practical of his books. The psychoanalytically trained part of me began to wonder what had motivated me to write a book on a topic so similar to that which had earlier drawn the attention of my revered teacher. There is no pressing need for another book on psychiatric evaluation; furthermore, evaluation is a very difficult subject to write about in a straightforward way. Whatever my unconscious motivations may have been, I hope they were less significant than those of which I was aware. I wrote this book mainly as part of an effort to reverse certain trends in psychiatric education. In the last decade psychiatrists have increasingly been trained in an environment that emphasizes brief evaluation of patients and de-emphasizes teaching about the complexity of human behavior and experience. Trainees no longer study psychiatric evaluation in a systematic manner. They take fewer intensive histories, fill out forms instead of describing the patient's mental status, and, with rare exceptions, are not taught how to conceptualize biological and psychosocial interactions.

Medical Management of the Thoracic Surgery Patient E-Book

Stroke is one of the major causes of disability in the world. Consequently, an effective rehabilitation regimen is the goal of specialists working in the field worldwide. The implementation of rehabilitation programs for the stroke patient is broad in scope and requires, first of all, an objective scientific evaluation method. In 1980 the World Health Organization developed the International Classification of Impairments, Disabilities, and Handicaps. It categorized impairments and disabilities on the basis of functional evaluation but took into account cultural and socio-economic factors when defining handicaps, thus making it difficult to use the same functional evaluation instrument for the three phenomena. In this monograph, experts in the treatment of stroke from Japan, the United States, and Europe share their ideas presented during the 31st Annual Convention of the Japanese Association of Rehabilitation Medicine held in June 1994. All the participants freely contributed their views on the functional assessment and prognosis of stroke patients. Indeed, their contributions shed light on possible breakthroughs in the future for the development of rehabilitation regimens for stroke patients.

Functional Evaluation of Stroke Patients

Based on best practices prescribed in *The Guide to Physical Therapist Practice, Essentials of Cardiopulmonary Physical Therapy, 3rd Edition* provides comprehensive coverage of anatomy and physiology, assessment, and aspects of the cardiopulmonary systems, with a focus on their interaction. The disablement model is used in describing the eight cardiopulmonary practice patterns. Expert author Ellen Hillegass also discusses pathophysiology, pharmacology, and interventions in the outpatient setting. Incorporating Guide language, her practical approach progresses logically from basic sciences through intervention, and emphasizes lifespan considerations. Material follows *The Guide to Physical Therapist Practice 2nd Edition*, reflecting best practices as defined by the American Physical Therapy Association. Evidence-based content is based on the latest

research in the field. Case studies show the application of concepts with real-world examples. Pharmacology chapters reflect both the rehabilitation background of physical therapists and the pharmaceutical expertise of a pharmacist. A focus on wellness follows the disablement model. Information on geriatric and pediatric cardiopulmonary physical therapy is easy to apply to patient situations. Testing for both cardiac and pulmonary dysfunction is conveniently located in a single chapter. Cardiovascular medication information covers the latest drugs used in cardiopulmonary physical therapy. Information on thoracic organ transplantation simplifies and explains these complex procedures. NEW chapters cover the lymphatic system and pediatrics. Revised chapters on cardiopulmonary anatomy and physiology differentiate between information that is need to know and that is nice to know. An Evolve companion website includes medical animations to illustrate concepts, along with a glossary, glossary exercises, and reference lists from the book linked to MEDLINE abstracts.

Non-Operating Room Anesthesia E-Book

This new edition of Evaluation and Treatment of Myopathies is written for the clinician who sees patients with muscle disease, or the patient with complaints of pain or weakness of muscle. Like the original, this new edition is divided into 3 primary sections: Approach to the Patient with Muscle Disease, Specific Myopathies, and General Strategies of Clinical Management, each section providing practical guidance to eliciting key histories and demonstrate findings upon examination. This new edition also provides guidance on the next steps in diagnoses as well as the latest information on pathogenesis, diagnosis, and treatment, in an integrated manner, so as to give trainees, practicing clinicians and others who see neuromuscular disease perspective on how to evaluate and care for patients. New and revised tables, figures, and references are selected and organized to present information of clinical importance to provide the most up-to-date resource on the myopathies.

Essentials of Cardiopulmonary Physical Therapy - E-Book

Abstract TextBackground: The Southeastern Ontario(SEO) Community Stroke Rehabilitation Program (CSRP) began in 2009. While the program has seen a steady increase in referrals and visits, a consistent approach to the evaluation of patient experience is needed. Methods: A literature review and environmental scan was conducted to identify: 1) existing questionnaires/tools, 2) patient perspectives of essential elements of effective community rehabilitation; and 3) best practices for questionnaire implementation. Results were summarized into themes and used to evaluate content of existing tools. Findings and recommendations were presented to an advisory group of patients, caregivers and service providers. Results: Eight elements of patient experience were identified as essential including measurement of: 1) impact on patient's knowledge; 2) impact on ability to perform daily activities; 3) transition from hospital to home; 4) speed of service delivery; 5) access to further rehabilitation within the community; 6) engagement of patient as active participant in their rehabilitation; 7) patient's self-rating of recovery; and 8) patient feeling prepared for discharge. These elements were mapped against the content of 3 existing tools and supplemental questions were created to address missing themes. Essential elements were confirmed by the advisory group; questions refined; and recommendations were made for pilot testing. Conclusion: This partnership between students, researchers, knowledge brokers (Stroke Network of SEO), clinicians, stroke survivors and caregivers has produced a practical, evidence-informed program evaluation strategy. Next Steps: A tool incorporating the 8 elements of patient experience and recommendations will be tested for implementation feasibility and final version incorporated into ongoing patient CSRP evaluation.

The Washington Manual of Surgery

The demand for anesthesiologists outside of the operating room continues to grow as the number of minimally invasive procedures proliferates and the complexity of diagnostic procedures undertaken outside of the OR increase. Non-Operating Room Anesthesia is an easy-to-access, highly visual reference that facilitates an in-depth understanding of NORA procedures and protocols needed to minimize risk and complications and to maximize growth opportunities. Effectively assess and manage risks and differences in procedures through in-depth discussions addressing the unique challenges and issues associated with non-traditional settings. Review the most recent knowledge with updated coverage of the use of the electrophysiology lab (EPL) and cardiac catheterization laboratory (CCL) in the care of the critically ill patient; patient assessment; and anesthetic considerations. Prepare for varying anesthetic conditions in non-OR settings with in-depth discussions on communication, management, and laboratory preparation for anticipated concerns or complications. Glean all essential, up-to-date, need-to-know information about NORA with coverage that surpasses the depth and scope of review articles and other references. Focus on the practical guidance you need thanks to a user-friendly color-coded format, key points boxes, drug descriptions, checklist boxes (for monitors, equipment, and drugs), and over 400 color photos that help you visualize each procedure and setting.

Evaluation of the Patient Safety Improvement Corps

An evaluation of the first two years of the Agency for Healthcare Research and Quality and Veterans' Affairs' Patient Safety Improvement Corps program for improving health care professionals' patient-safety knowledge and skills. Data were collected through in-person interviews at the final training session, and through telephone follow-up interviews one year later. Overall, participants valued the tools and skills they learned and continue to use.

EVALUATING PATIENT EXPERIENCE IN A COMMUNITY STROKE REHABILITATION PROGRAM: DEVELOPMENT OF A TOOL AND EVALUATION PLAN.

Internationally renowned cardiologists Drs. Catherine M. Otto and Robert O. Bonow help you to apply all of the latest scientific knowledge and clinical strategies with Valvular Heart Disease, a companion to Braunwald's Heart Disease. This indispensable resource for your everyday practice provides all of the knowledge you need to give your patients the most accurate diagnoses, the best possible heart disease treatment options, and the expert care they deserve. Consult this title on your favorite e-reader, conduct rapid searches, and adjust font sizes for optimal readability. Compatible with Kindle®, nook®, and other popular devices. Apply today's best medical and surgical approaches with comprehensive, expert guidance on today's full range of clinical heart disease treatments. Provide appropriate care to pediatric and pregnant patients with focused chapters on the unique needs of these special populations. Update your knowledge of these increasingly common heart diseases with brand-new chapters covering 3-dimensional anatomy of the aortic and mitral valves; clinical and genetic risk factors for calcific valve disease; risk assessment for aortic and mitral valve surgery; image-guided transcatheter valve procedures; optimal timing of valve

interventions; state-of-the-art valve surgery; and much more. Apply the most current standards of practice with summaries of the ACC/AHA and new ESC valvular heart disease guidelines in each chapter. Vividly visualize heart valve anatomy and dysfunction, as well as important techniques and procedures, thanks to a multitude of detailed illustrations, full-color images, and online video content. Search the full text and access all the images online at Expert Consult.

Evaluation and Testing in Nursing Education

Uveitis is the comprehensive reference you need for a balanced approach to basic science and clinical application. Robert B. Nussenblatt and Scott M. Whitcup provide a cohesive and integrated discussion of the topic, covering everything from the role of surgery to AIDS to anterior uveitis and more. This new edition even includes full color throughout with 400 photographs and illustrations.

Comprehensive yet readable, this resource packs everything you need in patient evaluation and management to achieve optimal results. Covers the medical, pharmacological, and surgical treatment of uveitis to serve as a complete overview of all uveitis related information. Features multiple chapters on diagnostic approach to help you overcome challenges in making accurate diagnoses. Provides additional information on inflammatory eye diseases in chapters on scleritis, masquerade syndromes, and the role of inflammation in other ocular diseases for more comprehensive coverage. Includes illustrated case studies to supplement major clinical points and provide insight into real situations that you can apply in practice. Highlights important information in key points boxes that make it easy to locate crucial points on each topic. Features significant updates to the chapters on the role of surgery in the patient with uveitis, acquired immune deficiency syndrome, anterior uveitis, white dot syndromes, and masquerade syndromes. Covers advancements and new developments on all aspects of uveitis including new medical and surgical treatments. Presents photographs in full color to better prepare you for actual clinical diagnosis.

Patient Involvement in Health Technology Assessment

This two-volume report (vol. 1, Issues & vol. 2, Methods) describes methodologies for translating AHCPR-supported (Agency for Health Care Policy & Research) clinical practice guidelines into review criteria & performance measures, & applications of those measures in quality of care standard-setting, assessment & improvement. Emergency Psychiatry

This pertinent book assists occupational therapists and other health care providers in developing up-to-date psychogeriatric programs and understanding details of treating the cognitively impaired elderly. There exists a significant demand for occupational therapy in psychogeriatrics now. As the elderly population increases, especially elderly requiring rehabilitative care, the need for occupational therapy in psychogeriatrics will increase markedly. Evaluation and Treatment of the Psychogeriatric Patient emphasizes the expertise of leading psychogeriatric occupational therapists, focusing on transitional programming, treating cognitive

deficits, and recognizing the malignant cultural myths which continue to disenfranchise and denigrate the elderly. Appropriate diagnosis and management of the elderly population is vital to their ability to function independently. Through detailed, operationally useful descriptions of current geriatric day care hospitals and psychogeriatric transitional programs, this book will be an invaluable aid for social workers, nurses, geriatric counselors, and physical therapists. These helping professionals will be better equipped to develop up-to-date psychogeriatric programs and will better understand the details involved in treating the mentally impaired elderly.

MDCT: A Practical Approach

Published in association with the Society for Vascular Surgery, Rutherford's Vascular Surgery presents state-of-the-art updates on all aspects of vascular health care. Extensively revised by many new authors to meet the needs of surgeons, interventionalists, and vascular medicine specialists, this medical reference book incorporates medical, endovascular and surgical treatment, as well as diagnostic techniques, decision making and fundamental vascular biology. Consult this title on your favorite e-reader, conduct rapid searches, and adjust font sizes for optimal readability. Master the latest developments, techniques, and approaches with thorough updates on endovascular applications, vascular access, imaging, non-operative management, and much more. View clinical and physical findings and operative techniques more vividly with a full-color layout and images. Get answers you can depend on. Rutherford's delivers the world's most trusted information on all major areas of vascular health care, is written by international experts, and includes up-to-date bibliographies and annotated recommended references. Discover emerging techniques in rapidly advancing topics, with special emphasis on endovascular coverage, vascular imaging, angiography, CT and MRI. Explore brand new chapters on dialysis catheters, renovascular disease, and management of branches during endovascular aneurysm. Rutherford's Vascular Surgery E-Book

Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are

determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.

Second Report of the Expert Panel on Detection, Evaluation, and Treatment of High Blood Cholesterol in Adults

Covers the latest research on a sensitive and controversial topic in a professional and well researched manner. Provides practical outlook as well as model guidelines and software tools that should be of interest to people who use the software tools described and those who do not. Related title by Co-author Geert Molenbergh has sold more than 3500 copies world wide. Provides dual viewpoints: from scientists in the industry as well as regulatory authorities.

Neuropsychological Evaluation of the Older Adult

Revised and updated by residents and faculty of one of the world's top surgical training programs, The Washington Manual of Surgery, Fifth Edition provides concise guidelines and algorithms for diagnosis and management of surgical diseases. The book's pocket size and user-friendly outline format ensure fast access to information. This edition incorporates evidence-based medicine into each chapter, so readers can fully understand the reasoning behind the recommendations. Minimally invasive techniques, including endovascular, are incorporated into all relevant anatomical site and disease chapters. Coverage of vascular disease has been reorganized into three chapters: cerebrovascular disease, thoracoabdominal vascular disease, and peripheral vascular disease.

Practical Head and Neck Oncology

Lead editor of Braunwald's Heart Disease, Dr. Douglas L. Mann, and nationally and internationally recognized heart failure expert Dr. G. Michael Felker, bring you the

latest, definitive state-of-the art information on heart failure in this outstanding Braunwald's companion volume. Heart Failure, 3rd Edition keeps you current with recent developments in the field, improved patient management strategies, and new drug therapies and implantable devices that will make a difference in your patients' lives and your practice.

Heart Failure E-Book

This is the first book to offer a comprehensive guide to involving patients in health technology assessment (HTA). Defining patient involvement as patient participation in the HTA process and research into patient aspects, this book includes detailed explanations of approaches to participation and research, as well as case studies. Patient Involvement in HTA enables researchers, postgraduate students, HTA professionals and experts in the HTA community to study these complementary ways of taking account of patients' knowledge, experiences, needs and preferences. Part I includes chapters discussing the ethical rationale, terminology, patient-based evidence, participation and patient input. Part II sets out methodology including: Qualitative Evidence Synthesis, Discrete Choice Experiments, Analytical Hierarchy Processes, Ethnographic Fieldwork, Deliberative Methods, Social Media Analysis, Patient-Reported Outcome Measures, patients as collaborative research partners and evaluation. Part III contains 15 case studies setting out current activities by HTA bodies on five continents, health technology developers and patient organisations. Each part includes discussion chapters from leading experts in patient involvement. A final chapter reflects on the need to clearly define the goals for patient involvement within the context of the HTA to identify the optimal approach. With cohesive contributions from more than 80 authors from a variety of disciplines around the globe, it is hoped this book will serve as a catalyst for collaboration to further develop patient involvement to improve HTA. "If you're not involving patients, you're not doing HTA!" - Dr. Brian O'Rourke, President and CEO of CADTH, Chair of INAHTA

The Evaluation of Surrogate Endpoints

Hair is subject to either intrinsic (i.e. physiological) aging or extrinsic (i.e. premature) aging that can be attributed to external factors. The intrinsic factors can be associated with genetic mechanisms and are subject to individual variations, whereas external factors include ultraviolet radiation, air pollution, smoking, and possibly nutrition. Leading experts have contributed to this book which offers a practical approach to the evaluation and management of various forms of alopecia, including their pathogenesis, the diagnostic procedures involved, medical treatments, and nutritional issues. A completely new surgical technique for hair transplantation that leaves behind sufficient follicle unit tissue to regenerate hairs is also described. Being comprehensive and easy-to-read, this book should be very useful for dermatologists who wish to diagnose and treat their patients with hair problems more effectively.

See for yourself how key techniques are performed with an expanded online surgical video collection covering Arthroscopic Rotator Cuff Repair: Double Row Techniques; Arthroscopic Repair of Multidirectional Instability of the Shoulder; Ulnar Collateral Ligament Repair and Reconstruction: DANE Technique; Double Bundle Anterior Cruciate Ligament Reconstruction; and Management of Proximal Tibiofibular Instability.

Functional Evaluation of Stroke Patients

Presents the National Cholesterol Education Program's updated recommendations for cholesterol management with examination of available evidence on coronary heart disease (CHD) and high blood cholesterol. Topics of discussion include: patients with established CHD and others at high risk; cholesterol lowering in women, the elderly, and young adults; physical activity and weight loss as components of dietary therapy; drug therapy; cholesterol lowering and total mortality; and cost-effectiveness of cholesterol lowering. Includes tables and dietary recommendations with sample menus.

The American Psychiatric Association Practice Guidelines for the Psychiatric Evaluation of Adults, Third Edition

Emergency Medicine is a brand new book focusing on the common pitfalls and mistakes that can occur when dealing with high-risk conditions during standard medical practice. Concise chapters focus on clinical relevance, addressing the mistakes, the consequences and the knowledge necessary to avoid high-risk mistakes. An essential book for all staff dealing with emergencies.

Evaluation and Treatment of Myopathies

Named a 2013 Doody's Essential Purchase! "This book should be required reading for all educators! It is necessary for educators to keep pace with the changing dynamics of learners and this book provides insights into how to achieve this goal."--Doody's Medical Reviews Praise for the Third Edition: "Without question, this book should be on every nurse educator's bookshelf."--Nursing Education Perspectives The "gold standard" for evaluation and testing in nursing education, this revision helps educators measure and evaluate the level of learning that their students have achieved and presents fundamental concepts of what constitutes reliable tools and rubrics for measuring students' classroom and clinical performance. It describes how to develop a test blueprint and to assemble, administer, write, and score all types of tests and test questions, and analyze tests and test performance for both classroom and clinical evaluation. It includes guidelines for preventing cheating, and for conducting productive posttest discussions. The book offers strategies for evaluating higher cognitive levels of learning and for evaluating written assignments with sample scoring rubrics. The book explores important social, ethical, and legal issues associated with testing and evaluation. The text meets NLN Certification Competency #3: Use Assessment & Evaluation Strategies (15% of CNE Test BluePrint). New to the Fourth edition: Expanded coverage of essential concepts in assessment, evaluation, and testing in nursing classroom and clinical education A new chapter on online testing, with and without an online teaching platform such as BlackBoard, standardized online testing packages, establishing valid online-based testing, and related issues Current research, references, and new examples Stronger focus on evaluating higher level cognitive functions Additional test preparation for NCLEX and other certification tests Development of test items that prepare students for licensure and certification exams, including discussion of innovative items being piloted for possible use on the NCLEX Expanded coverage on establishing rubrics for assessing written assignments New information on using simulation for "High Stakes Testing" Online teaching guide that includes PowerPoint slides, sample core syllabus, and learner activities

Using Clinical Practice Guidelines to Evaluate Quality of Care

Textbook of Critical Care, by Drs. Jean-Louis Vincent, Edward Abraham, Frederick A. Moore, Patrick Kochanek, and Mitchell P. Fink, remains your best source on effective management of critically ill patients. This trusted reference - acclaimed for its success in bridging the gap between medical and surgical critical care - now features an even stronger focus on patient outcomes, equipping you with the proven, evidence-based guidance you need to successfully overcome a full range of practice challenges. Inside, you'll find totally updated coverage of vital topics, such as coagulation and apoptosis in certain critical care illnesses, such as acute lung injury and adult respiratory distress syndrome; sepsis and other serious infectious diseases; specific organ dysfunction and failure; and many other vital topics. At www.expertconsult.com you can access the complete contents of the book online, rapidly searchable, with regular updates plus new videos that demonstrate how to perform key critical care procedures. The result is an even more indispensable reference for every ICU. Access the complete contents of the book online at www.expertconsult.com, rapidly searchable, and stay current for years to come with regular online updates. Practice with confidence by consulting with a "who's who" of global experts on every facet of critical care medicine.

Implement today's most promising, evidence-based care strategies with an enhanced focus on patient outcomes. Effectively apply the latest techniques and approaches with totally updated coverage of the importance of coagulation and apoptosis in certain critical care illnesses, such as acute lung injury and adult respiratory distress syndrome; sepsis and other serious infectious diseases; specific organ dysfunction and failure; and many other vital topics. See how to perform key critical care procedures by watching a wealth of new videos online. Focus on the practical guidance you need with the aid of a new, more templated format in which basic science content has been integrated within clinical chapters, and all procedural content has been streamlined for online presentation and paired with videos.

Evaluation and Treatment of the Psychogeriatric Patient

Written and edited by leading emergency psychiatrists, this is the first comprehensive text devoted to emergency psychiatry. The book blends the authors' clinical experience with evidence-based information, expert opinions, and American Psychiatric Association guidelines for emergency psychiatry. Case studies are used throughout to reinforce key clinical points. This text brings together relevant principles from many psychiatric subspecialties—community, consultation/liaison, psychotherapy, substance abuse, psychopharmacology, disaster, child, geriatric, administrative, forensic—as well as from emergency medicine, psychology, law, medical ethics, and public health policy. The emerging field of disaster psychiatry is also addressed. A companion Website offers instant access to the fully searchable text. (www.glickemergencypsychiatry.com)

Written by a multidisciplinary team of residents, fellows, and faculty at the Massachusetts General Hospital, this new addition to the LWW Handbook Series is a practical, accessible guide to the evaluation and management of trauma and burn patients. In a format designed for quick reference, this pocket-sized book presents hospital tested guidelines and procedures for pre-hospital care and transport, immediate assessment and interventions, and evaluation and management of specific injuries at each anatomic site. Chapters on specific injuries follow a consistent structure: epidemiology and mechanisms, important surgical anatomy, important physiology, initial evaluation, diagnostic methods, nonoperative management, operative techniques, postoperative care, rehabilitation, and long-term follow-up.

Alopecias - Practical Evaluation and Management

This User's Guide is intended to support the design, implementation, analysis,

interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.
