Kenneth A. Posner spent close to two decades as a Wall Street analyst, tracking the so-called "specialty finance" sector, which included controversial companies such as Countrywide, Fannie Mae, Freddie Mac, CIT, and MasterCard many of which were caught in the subprime mortgage and capital markets crisis of 2007. While extreme volatility is nothing new in finance, the recent downturn caught many off guard, indicating that the traditional approach to decision making had let them down. Introducing a new framework for handling and evaluating extreme risk, Posner draws on years of experience to show how decision makers can best

cope with the "Black Swans" of our time. Posner's shrewd assessment combines the classic fundamental research approach of Benjamin Graham and David Dodd with more recent developments in cognitive science, computational theory, and quantitative finance. He outlines a probabilistic approach to decision making that involves forecasting across a range of scenarios, and he explains how to balance confidence, react accurately to fast-breaking information, overcome information overload, zero in on the critical issues, penetrate the information asymmetry shielding corporate executives, and integrate the power of human intuition with sophisticated analytics. Emphasizing the computational resources we already have at our disposal our computers and our minds Posner offers a new track to decision making for analysts, investors, traders, corporate executives, risk managers, regulators, policymakers, journalists, and anyone who faces a world of extreme volatility.

[Note: eBook version of latest edition now available; see Amazon author page for details.] This revised ninth edition lays a firm foundation for thinking about and conducting investment. It does this by helping to build capital markets intuition and critical thinking skills. The material in this book is the product of 25+ years of investment research and experience (academic, personal, and professional), and 20+ painstaking years of destructive testing in university classrooms. Although the topic is applied investments, the integration of finance, economics, accounting, pure mathematics, statistics, numerical techniques, and spreadsheets (or programming) make this an ideal capstone course at the advanced undergraduate or masters/MBA level. The book has a heavily scientific/quantitative focus, but the material should be accessible to a motivated practitioner or talented individual investor with (for the most part) only high school level mathematics or

intermediate level University mathematics. Although aimed at the advanced undergraduate or masters/MBA level, the careful explanations of a wide range of advanced capital markets topics makes this an excellent book for a U.S. PhD student in need of an easily accessible foundation course in capital markets theory and practice. There are literature reviews of multiple advanced areas, and more than 30 unanswered research questions are identified; these research questions would be ideal for a master's thesis or a chapter of a PhD. The applied nature of the book also makes it ideal for capital markets practitioners. For example, in one exercise, the reader is taken by the hand and walked through construction of a worked spreadsheet example of an active alpha optimization using actual stock market data. (The reader gets to build ex-ante alphas, and feed them into an optimization that weighs returns, risk, and transaction costs. A portfolio is rebalanced based on the optimization, and ultimately a backtest is conducted to measure ex post alpha.) Other practitioner material includes advanced time value of money (TVM) exercises, a review of retirement topics, extensive discussions of dividends, P/E ratios, transaction costs, the CAPM, and value versus growth versus glamour versus income, and a review of more than 100 years of stock market performance, and more than 200 years of interest rates. The list of references at the end of this edition of the book has 1,096 items from the academic and practitioner literature. The index has over 8,700 entries (in over 4,100 lines). Special attention is paid to more difficult topics like construction of Student-t statistics, the Roll critique, smart beta, factor-based investing, the Fama-French

critique, and Grinold-Kahn versus Black-Litterman models. Every investor needs capital markets intuition and critical thinking skills to conduct confident, deliberate, and skeptical investment. The overarching goal of this book is to help investors build these skills. Note that a separate book with more than 500 test questions exists to accompany this book.

Health Promotion and Aging

A comprehensive guide to the structure, synergy, and challenges in U.S. health care delivery. *Introduction to Health Care Services: Foundations and Challenges* offers new insights into the most important sectors of the United States' health care industry and the many challenges the future holds. Designed to provide a comprehensive and up-to-date understanding of the system, this textbook covers the many facets of health care delivery and details the interaction of health, environments, organizations, populations, and the health professions. Written by authors with decades of experience teaching and working in health care administration and management, the book examines the current state and changing face of health care delivery in the United States. Each chapter includes learning objectives and discussion questions that help guide and engage deeper consideration of the issues at hand, providing a comprehensive approach for students. Case studies demonstrating innovations in the delivery of health care services are also presented. Health care administration requires a thorough understanding of the multiple systems that define and shape the delivery of health care in the United States. At the same time, it is important for students to

The innovative and unique feature of this book is that it does not contain theoretical concept that cannot be translated into practice. The model which introduces this volume sets the stage for addressing the major phases of the strategic management process: environmental analysis, strategy formulation and development, strategy evaluation and control. Its conceptual and operational structure is described in the first part, together with a practically oriented definition of strategy, and a brief discussion of the logic and benefits of the judgmental modeling approach to decision making. The second part critically addresses the classical approaches to the analysis of the external and internal environmental factors, which have an impact on the “functioning” of the basic model, i.e. the structural characteristics of the industry context, and the companies’ technical, organizational, financial, and human resources, including the translation into operational models of otherwise rather theoretical concepts.

Examining the crucial interrelationship between nursing research and health policy, this book presents examples of specific health care policy that has been influenced, implemented, or changed as a result of nursing research. It builds on the discussion of this relationship as described in the editors' earlier book, *Shaping Health Policy through Nursing Research*, named a Doody's Core Title in 2013 and an AJN Book of the Year in 2011. This current edition updates earlier information with new nursing research by esteemed scholars. It encompasses research related to major policy statements of the decade, including the IOM Future of Nursing report, the Affordable Care Act, and the Blueprint for Genomics in Nursing, and highlights how they have influenced, and will continue to influence, health policy. Written for multiple audiences including undergraduate and graduate students, faculty, and nursing professionals, the book presents information on how science

Foundations for Scientific Investing (Revised Ninth): Capital Markets Intuition and Critical Thinking Skills

Classical and behavioral finance are often seen as being at odds, but the idea of “popularity” has been introduced as a way of reconciling the two approaches. Investors like or dislike various characteristics of securities for rational reasons (as in classical finance) or irrational reasons (as in behavioral finance), which makes the assets popular or unpopular. In the capital markets, popular (unpopular) securities trade at prices that are higher (lower) than they would be otherwise; hence, the shares may provide lower (higher) expected returns. This book builds on this idea and expands it in two major ways. First, it introduces a rigorous asset pricing model, the popularity asset pricing model (PAPM), which adds investor preferences for security characteristics other than the risk and expected return that are part of the capital asset pricing model. A major conclusion of the PAPM is that the expected return of any security is a linear function of not only its systematic risk (beta) but also of all security characteristics that investors care

about. The other major contribution of the book is new empirical work that, while confirming the well-known premiums (such as size, value, and liquidity) in a popularity context, supports the popularity hypothesis on the basis of portfolios of stocks based on such characteristics as brand value, sustainable competitive advantage, and reputation. Popularity unifies the factors that affect price in classical finance with those that drive price in behavioral finance, thus creating a unifying theory or bridge between classical and behavioral finance.
