Gain a deeper understanding of Asian financial reporting and how to detect irregularities The Asian region, and particularly China, is becoming a hotbed of investment activity. There have been quite a few accounting scandals in Asia in the recent years - now rivaling those we have seen in the Americas and Europe. Assessing potential or active overseas investments requires reliance on financial statements, the full parameters of which may vary from region to region. To effectively analyze statements, it is necessary to first understand the framework underlying these financial statements and then lay out a protocol for detecting irregularities. It's impossible to create and implement a practical plan without a deeper knowledge of the various factors at play. Asian Statement Analysis: Detecting Financial Irregularities provides a framework for analysis that makes irregularities stand out. Authors Chin Hwee Tan and Thomas R. Robinson discuss international financial reporting standards, including characteristics particular to the Asian region. Tan and Robinson's combined background in academia and Asian finance give them a multi-modal perspective and position them as top authorities on the topic. In the book, they address issues such as: Detection of irregularities independent of particular accounting rules The most common irregularities in the Asian market Similarities and differences between U.S. and Asian accounting techniques An overarching framework for irregularity detection The book uses real-world examples to illustrate the concepts presented, with the focus on Asian companies. As the first ever in-depth study on manipulation and irregularities in the Asian market, Asian Financial Statement Analysis: Detecting Financial Irregularities is uniquely positioned to be a valuable resource in the move toward the next phase of global reporting standards.

Belt and Road Economics

This book is a collection of high-impact papers accepted and presented at the 2019 Vietnam's Business and Economics Research Conference (VBER2019) organised by Ho Chi Minh City Open University held on 18th–20th July 2019. The Special Issue is associated with a broad coverage of the contemporary issues in Business and Economics in Vietnam and other emerging markets reflecting a key theme of VBER2019: Vietnam's Place in the Asia Pacific Region. A total of 14 papers were published from more than the 120 submissions to the VBER2019 Conference. Published papers had been undergone a rigorous reviewing process conducted by the Journal of Risk and Financial Management. The papers incorporated in this book address contemporary issues in business and economics from Vietnam and other emerging markets in the Asian region from various angles such as economics, finance, and statistics to management science. At the time of writing this note, some of the papers have attracted more than 1000 downloads in 3 months. In particular, a paper on "Foreign Direct Investment and Economic Growth from Developing Countries in the Short Run and Long Run" by Trang Thi-Huyen Dinh and her team has attracted almost 6000 downloads in 3 months. These statistics indicate that the papers published in this Special Issue have attracted the wide interest of readers. Among these 14 published papers, three main areas of important contemporary issues in Business and Economics in the Asian region can be identified. First, a block of papers deals with various important and fundamental issues in the emerging markets the Asian region, from exchange rate regime, financial inclusion, and financial development to energy consumption and environmental degradation. On the issue of CO₂ emissions, energy consumption and economic growth in the ASEAN, Vo, Vo, and Le utilized various time series econometrics approaches. Key findings from this paper indicate that there are no long-run relationships among carbon dioxide (CO₂) emissions, energy consumption, renewable energy, population growth, and economic growth in the Philippines and Thailand, but a relationship does exist in Indonesia, Myanmar, and Malaysia. Loo, in his paper on financial inclusion for the ASEAN, concluded that advancing internet capability and availability present investors an opportunity to offer financial technology or Fintech to meet the need for financial services in this digital era. Second, a challenge in quantitative studies for a single country, such as Vietnam, with limited data is generally noted. However, various empirical studies on Vietnam's business and economics issues have been conducted. Nguyen, Quan, and Pham examined the cultural distance and entry mode of foreign direct investment in Vietnam. A key finding from their paper is that when there is a great cultural difference between Vietnam and their home country, foreign-invested firms prefer wholly owned subsidiaries over equity joint ventures. Within the Vietnamese market, Pham, Vo, Ho, and McAleer conducted a study on the issue of corporate financial distress. The authors conclude that the corporate financial distress prediction model, which includes accounting factors with macroeconomic indicators, performs much better than alternative models. In addition, the evidence confirms that the global financial crisis (GFC) had a damaging impact on each sector, with the Health & Education sector demonstrating the most impressive recovery post-GFC, and the utilities sector recording a dramatic increase in

bankruptcies post-GFC. At another extreme of the spectrum, Van and Nguyen considered that competitive context, social influences, the understanding of managers about corporate social responsibility (CSR), and the internal environment of companies are the four drivers of CSR. The authors also argued that in the four drivers, competitive context has the strongest impact on adopting CSR. Third, last but not least, various papers focus on an important aspect of public finance. For an example, Pham, Pham, and Ly documented the effect of double taxation treaties on the bilateral trade of Vietnam with ASEAN member states, thereby making an extensive comparison with its EU partner countries. Their findings indicate the significant contributions of the tax treaties to Vietnam's trade performance, not exclusively with ASEAN but also with EU partner countries. In addition, regarding public finance for Vietnam, Nguyen, Vo, Ho, and Vo investigated the contribution of fiscal decentralisation to economic growth across provinces in Vietnam. For the first time in Vietnam, the fiscal decentralisation index together its two subcomponents, including fiscal importance and fiscal autonomy, are developed. Findings from this paper indicate that while fiscal importance and an overall level of fiscal decentralisation have provided negative impact on provincial economic growth, fiscal autonomy has a positive impact on economic growth across provinces in Vietnam.

Fundamentals of Corporate Finance 4th Edition Asia Edition

Neoclassical Finance provides a concise and powerful account of the underlying principles of modern finance, drawing on a generation of theoretical and empirical advances in the field. Stephen Ross developed the no arbitrage principle, tying asset pricing to the simple proposition that there are no free lunches in financial markets, and jointly with John Cox he developed the related concept of risk-neutral pricing. In this book Ross makes a strong case that these concepts are the fundamental pillars of modern finance and, in particular, of market efficiency. In an efficient market prices reflect the information possessed by the market and, as a consequence, trading schemes using commonly available information to beat the market are doomed to fail. By stark contrast, the currently popular stance offered by behavioral finance, fueled by a number of apparent anomalies in the financial markets, regards market prices as subject to the psychological whims of investors. But without any appeal to psychology, Ross shows that neoclassical theory provides a simple and rich explanation that resolves many of the anomalies on which behavioral finance has been fixated. Based on the inaugural Princeton Lectures in Finance, sponsored by the Bendheim Center for Finance of Princeton University, this elegant book represents a major contribution to the ongoing debate on market efficiency, and serves as a useful primer on the

In Racism and Cultural Studies E. San Juan Jr. offers a historical-materialist critique of practices in multiculturalism and cultural studies. Rejecting contemporary theories of inclusion as affirmations of the capitalist status quo, San Juan envisions a future of politically equal and economically empowered citizens through the democratization of power and the socialization of property. Calling U.S. nationalism the new “opium of the masses,” he argues that U.S. nationalism is where racist ideas and practices are formed, refined, and reproduced as common sense and consensus. Individual chapters engage the themes of ethnicity versus racism, gender inequality, sexuality, and the politics of identity configured with the discourse of postcoloniality and postmodernism. Questions of institutional racism, social justice, democratization, and international power relations between the center and the periphery are explored and analyzed. San Juan fashions a critique of dominant disciplinary approaches in the humanities and social sciences and contends that “the racism question”

functions as a catalyst and point of departure for cultural critiques based on a radical democratic vision. He also asks urgent questions regarding globalization and the future of socialist transformation of “third world” peoples and others who face oppression. As one of the most notable cultural theorists in the United States today, San Juan presents a provocative challenge to the academy and other disciplinary institutions. His intervention will surely compel the attention of all engaged in intellectual exchanges where race/ethnicity serves as an urgent focus of concern.

Brealey, Principles of Corporate Finance 13e describes the theory and practice of corporate finance. We hardly need to explain why financial managers must master the practical aspects of their job, but we should spell out why down-to-earth managers need to bother with theory. Throughout this edition, the authors demonstrate how managers use financial theory to solve practical problems. They also explore what financial managers should do to increase company value. Some of the biggest changes in this edition were prompted by the tax changes enacted in the U.S. Tax Cuts and Jobs Act passed in December 2017.

Beat the odds with a bold strategy from McKinsey & Company “Every once in a while, a genuinely fresh approach to business strategy appears” – legendary business professor Richard Rumelt, UCLA McKinsey & Company’s newest, most definitive, and most irreverent book on strategy—which thousands of executives are already using—is a must-read for all C-suite executives looking to create winning corporate strategies. Strategy Beyond the Hockey Stick is spearheading an empirical revolution in the field of strategy. Based on an extensive analysis of the key factors that drove the long-term performance of thousands of global companies, the book offers a ground-breaking formula that enables you to objectively assess your strategy’s real odds of future success. “This book is fundamental. The principles laid out here, with compelling data, are a great way around the social pitfalls in strategy development.” — Frans Van Houten, CEO, Royal Philips N.V. The authors have discovered that over a 10-year period, just 1 in 12 companies manage to jump from the middle tier of corporate performance—where 60% of companies reside, making very little economic profit—to the top quintile where 90% of global economic profit is made. This movement does not happen by magic—it depends on your company’s current position, the trends it faces, and the big moves you make to give it the strongest chance of vaulting over the competition. This is not another strategy framework. Rather, Strategy Beyond the Hockey Stick shows, through empirical analysis and the experiences of dozens of companies that have successfully made multiple big moves, that to dramatically improve performance, you have to overcome incrementalism and corporate inertia. “A different kind of book—I couldn’t put it down. Inspiring new insights on the facts of what it takes to move a company’s performance, combined with practical advice on how to deal with real-life dynamics in management teams.” —Jane Fraser, CEO, Citigroup Latin America

Asian Financial Statement Analysis

Two Crises, Different Outcomes examines East Asian policy reactions to the two major crises of the last fifteen years: the global financial crisis of 2008–9 and the Asian financial crisis of 1997–98. The calamity of the late 1990s saw a massive meltdown concentrated in East Asia. In stark contrast, East Asia avoided the worst effects of the Lehman Brothers collapse, incurring relatively little damage when compared to the financial devastation unleashed on North America and Europe. Much had changed across the intervening decade, not least that China rather than Japan had become the locomotive of regional growth, and that the East Asian economies had taken numerous steps to buffer their financial structures and regulatory regimes. This time Asia avoided disaster; it bounced back quickly after the initial hit and has been growing in a resilient fashion ever since. The authors of this book explain how the earlier financial crisis affected Asian economies, why government reactions differed so widely during that crisis, and how Asian economies weathered the Great Recession. Drawing on a mixture of single-country expertise and comparative analysis, they conclude by assessing the long-term prospects that Asian countries will continue their recent success.

Corporate Strategies for South East Asia After the Crisis presents an in-depth analysis by experts from Europe, Japan and South East Asia who have long-standing research experience in Asian economies and international business. The authors draw upon empirical research to analyze the questions facing multinational corporations active in the region, and go on to examine their strategies in production, marketing and corporate finance. They present a comprehensive overview of the current activities of multinational firms from Europe and Japan in South East Asia. The authors address both questions of international strategy and the role of multinational companies in a global economy, while taking into account how national differences affect strategic decision making. More than an essential reader for business people in Southeast Asia, the book
