From starry night rituals to garden toad totems, discover the enchanting craft of the HedgeWitch. Transform your life with a little help from nature! Working in harmony with the earth's energy is the heart of the free-spirited, simple garden magick known as HedgeWitchery. This guidebook from the immensely popular Silver RavenWolf has everything a new HedgeWitch needs to connect in a personal way with nature's creative, life-affirming energy and use it in magick and spellwork. HedgeWitch features a fourteen-lesson, hands-on guide that you complete at your own pace, interacting with different aspects of nature in simple yet life-changing ways. The fourteen rituals, which can be done alone or with a group, culminate in an inspiring dedication ceremony. Along with a wealth of helpful hints on using HedgeWitch magick for love, health, and beauty, this guide presents tips and recipes for soap making, tea-leaf reading, butterfly garden magick, organically growing your own herbs, and a variety of other ways to use HedgeWitchery in your hearth, home, and garden. Praise for Silver RavenWolf: "RavenWolf's prose is delightful and inviting a wonderful guidebook for readers who are serious about beginning a Wiccan spiritual journey."—Publishers Weekly

Assessments, understood as tools for tracking what and how well students have learned, play a critical role in the classroom. Developing Assessments for the Next Generation Science Standards develops an approach to science assessment to meet the vision of science education for the future as it has been elaborated in A Framework for K-12 Science Education (Framework) and Next Generation Science Standards (NGSS). These documents are brand new and the changes they call for are barely under way, but the new assessments will be needed as soon as states and districts begin the process of implementing the NGSS and changing their approach to science education. The new Framework and the NGSS are designed to guide educators in significantly altering the way K-12 science is taught. The Framework is aimed at making science education more closely resemble the way scientists actually work and think, and making instruction reflect research on learning that demonstrates the importance of building coherent understandings over time. It structures science education around three dimensions - the practices through which scientists and engineers do their work, the key crosscutting concepts that cut across disciplines, and the core ideas of the disciplines - and argues that they should be interwoven in every aspect of science education, building in sophistication as students progress through grades K-12. Developing Assessments for the Next Generation Science Standards recommends strategies for developing assessments that yield valid measures of student proficiency in science as described in the new Framework. This report reviews recent and current work in science assessment to determine which aspects of the Framework's vision can be assessed with available techniques and what additional research and development will be needed to support an assessment system that fully meets that vision. The report offers a systems approach to science assessment, in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another. Developing Assessments for the Next Generation Science Standards makes the case that a science assessment system that meets the Framework's vision should consist of assessments designed to support classroom instruction, assessments designed to monitor science learning on a broader scale, and indicators designed to track opportunity to learn. New standards for science education make clear that new modes of assessment designed to measure the integrated learning they promote are essential. The recommendations of this report will be key to making sure that the dramatic changes in curriculum and instruction signaled by Framework and the NGSS reduce inequities in science education and raise the level of science education for all students.

A trace element (TE) is a chemical element presented below ~ 0.1 wt. % and required in minute quantities to maintain proper physical functioning. TE analysis in clinical samples (plasma, urine, cerebro-spinal fluid, full-term placenta, hair, nails, buccal mucosa, semen, biopsy specimens) has received increasing attention. Based on 62 sources, current effort presents comparative knowledge about the attempts to accurately trace TE in clinical samples through Vis/NIR, PIXE, TXRF, GFAAS, ICP-MS. It informs the need for further research adjustments to reveal the reciprocal states of certain TE (Cu/Zn, Ca/Mg, Fe/ Pb) in correlation with their real-time counts in both maternal and neonatal umbilical cord plasma, and in relation to augmented oxidative stress. This would help to achieve consistency in interpreting obstetrical complications (preeclampsia, prematurity, or gestational diabetes). Generated hypotheses should target plausible mechanisms behind TE alterations and their stage-sensitive measures in gynecological cancer. New prospects are discussed in management and prognosis of endometriosis and premature ovarian failure (POF).

This collection of essays brings together an international roster of contributors to provide historical insight into women's agency and activism in education throughout from the seventeenth to the twentieth century. Topics discussed range

from the strategies adopted by individual women to achieve a personal education and the influence of educated women upon their social environment, to the organized efforts of groups of women to pursue broader feminist goals in an educational context. The collection is designed to recover the variety of the voices of women inhabiting different geographical and social contexts while highlighting commonality and continuity with reference to creativity, achievement, and the management and transgression of structures of gender inequality.
