### IPMA-D based on ICB 4 Courseware

The Global Financial Crisis and the Eurozone crisis that has followed have drawn attention to weaknesses in financial records, information and data. These weaknesses have led to operational risks in financial institutions, flawed bankruptcy and foreclosure proceedings following the Crisis, and inadequacies in financial supervisors' access to records and information for the purposes of a prudential response. Research is needed to identify the practices that will provide the records, information and data needed to support more effective financial analysis and risk management. The unique contribution of this volume is in bringing together researchers in distinct domains that seldom interact to identify theoretical, technological, policy and practical issues related to the management of financial records, information and data. The book will, therefore, appeal to researchers or advanced practitioners in the field of finance and those with an interest in risk management, computer science, cognitive science, sociology, management information systems, information science, and archival science as applied to the financial domain.

Institutional reforms and their contribution to development and growth have been a source of renewed interest as well as of many challenges over the last two decades. Identifying the forces that push towards reform and the conditions that determine the success or failure of reforms, building organizational arrangements needed to make modifications to the rules of the game sustainable, and understanding the limits to the transfer of reforms and to the help that international organizations and foreign institutions can provide to support change, raise intellectually difficult and politically highly sensitive issues. This book attempts to address these issues from an economic perspective. Combining knowledge and field experience, it develops an analysis of institutional changes and organizational transformations based on the experience of the public procurement reforms carried out in sub-Saharan Africa. This highlights the economic significance of procurement and the formidable obstacles that institutional changes face. Using an original dataset, it explores the gap between the expectations and what has been achieved. It develops a framework that intends to capture the complex interaction between the different components of reform and aims to provide useful insights for researchers and policy makers.

Acting Alone: A Scientific Study of American Hegemony and Unilateral Use-of-Force Decision Making is a straight-forward analysis of unilateral U.S. military actions, which are dependent upon the power disparity between the U.S. and the rest of the world. In solving the puzzle as to why individual presidents have made the "wrong" decision to act alone, the author lays out a president's behavior, during a crisis, as a two-step decision process. Acting Alone reviews the well-studied first decision, deciding to use force, based on international conflict literature and organized along traditional lines. The author then details the second decision, deciding to use unilateral force, with an explanation of the criticisms of multilateralism and the reasons for unilateralism. To test a new theory of unilateral use of force decision making, Acting Alone devises a definition and coding rules for

unilateral use of force, develops a sequential model of presidential use of force decision making, and constructs a new, alternative measure of military power, a Composite Indicator of Military Revolutions (CIMR). It then uses three methods - a statistical test with a heckman probit model, an experiment, and case studies - to test U.S. crisis behavior since 1937. By applying these three methods, the author finds that presidents are realists and make expected utility calculations to act unilaterally or multilaterally after their decision to use force. The unilateral decision, in particular, positively correlates with a wide military gap with an opponent, an opponent located in the Western hemisphere, and a national security threat.

"A must-read book for all mental health professionals wanting to keep up with today's most important clients practical, concrete, hands-on details from firsthand experts on ethnic populations." —Richard Suinn, PhD, Colorado State University, Past president (1999), American Psychological Association The rich mosaic of racial and ethnic diversity defines our society now more than ever. For students and professional psychologists, this translates into a critical need to address a range of cultural diversity issues, as well as potential biases. Recently, the American Psychological Association (APA) recognized the importance of cultural competence for psychologists through its adoption of its Multicultural Guidelines. Applying those guidelines to real-world practice is both complex and challenging. Only one text brings it all into sharp focus: *Strategies for Building Multicultural Competence in Mental Health and Educational Settings*. Edited and written by renowned multicultural experts, this informative guide is full of concrete strategies and case examples, all geared toward achieving the goal of culturally competent practice. Chapter by chapter, it uses a variety of practice modalities in various settings to help all mental health professionals increase their familiarity and compliance with the APA Multicultural Guidelines. Beginning with a useful summary of the APA guidelines, *Strategies for Building Multicultural Competence in Mental Health and Educational Settings* covers the guidelines' relevance to: Individual and group counseling Couples and family counseling Career counseling with people of color Independent practice settings Multicultural consultations and organizational change Academic mental health training settings Clinical and hospital settings College counseling center settings Elementary and secondary school settings This timely reference also considers building multicultural competence around indigenous healing practices; in clinical supervision contexts; and in culturally sensitive research. Taken together, the book is a much-needed blueprint for making culturally informed decisions, explaining how the multicultural initiatives you implement today can help shape the field's future.

This book examines the key role played by local governments in China's market-oriented economic reform process since 1978. In particular, it addresses the much debated questions of why Communist Party officials at the local level embraced market reform despite its potentially detrimental effects on their power, and how the choices they made have shaped institutional changes and the pattern of development in the economies under their jurisdiction. In contrast to most recent studies of local governments in China, which have tended to explain local state activism in terms of the economic interests of local government officials, this book highlights the role that political interests have played in shaping economic behaviour. The contention is that the active involvement of local governments in the economy has been motivated not only by a desire to seek economic benefits, but also, and more importantly, by political considerations. The political perspective emphasised in this book leads to a reassessment of the nature and effect of the role of local government in the economic growth and institutional changes in China's transitional economy. Tracing the behaviour of local government to its political origin, the book not only explains more fully the motivational sources of economic activism at the local level, but also demonstrates the contradictory ways in which local governments intervene in the economy, the internal weakness of the local state-led development, and how problems caused by politically-motivated economic intervention catalysed the privatisation of the local government-run economic sector during mid-1990s.

This new book shows how international crises are dangerous episodes that can be destabilizing not only to the actors directly involved but also to the entire international system. Recognizing the primacy of crises as defining moments in international relations, scholars and policy makers alike are increasingly concerned with identifying mechanisms for crisis prevention, management and resolution. Mediating International Crises is the first comprehensive study into one such mechanism that has been used with increasing frequency in the 20th Century: mediation by a third party. This important research attempts to determine whether third party mediation is an effective means of alleviating or managing the turbulent and violent consequences of crises. The authors examine three approaches to mediation: facilitation communication between parties, formulating possible agreements and manipulating the parties through sanctions or rewards. They explore how these mediation approaches affect crisis outcomes through sanctions or rewards The book begins with a thorough discussion of the theoretical literature on mediation, with particular attention paid to the important distinction between crisis management and conflict resolution. The authors then provide empirical analyses of instances of mediation in 20th century international crises, which is supplemented with data derived from simulated negotiation settings with human subjects.

In this book, Bryant Simon brings to life the politics of white South Carolina millhands during the first half of the twentieth century. His revealing and moving account explores how this group of southern laborers thought about and participated in politics and public power. Taking a broad view of politics, Simon looks at laborers as they engaged in political activity in many venues--at the polling station, on front porches, and on the shop floor--and examines their political involvement at the local, state, and national levels. He describes the campaign styles and rhetoric of such politicians as Coleman Blease and Olin Johnston (himself a former millhand), who eagerly sought the workers' votes. He draws a detailed picture of mill workers casting ballots, carrying placards, marching on the state capital, writing to lawmakers, and picketing factories. These millhands' politics reflected their public and private thoughts about whiteness and blackness, war and the New Deal, democracy and justice, gender and sexuality, class relations and consumption. Ultimately, the people depicted here are neither romanticized nor dismissed as the stereotypically racist and uneducated "rednecks" found in many accounts of southern politics. Southern workers understood the political and social forces that shaped their lives, argues Simon, and they developed complex political strategies to deal with those forces.

An epic spanning more than half a century of Taiwan's history, this breathtaking historical novel traces the fortunes of the Pengs, a family of Hakka Chinese settlers, across three generations from the 1890s, just before Taiwan was ceded to Japan as a result of the Sino-Japanese war, through World War II. Li Qiao brilliantly re-creates the dramatic world of these pioneers -- and the colonization of Taiwan itself -- exploring their relationships with the aboriginal peoples of Taiwan and their struggle to establish their own ethnic and political identities. This carefully researched work of fiction draws upon Li's own experiences and family history, as well as oral and written histories of the era. Originally published in Chinese as a trilogy, this newly translated edition is an abridgement for English-speaking readers and marks the work's first appearance in the English-speaking world. It was well-received in Taiwan as an honest -- and influential -- recreation of Taiwan's history before the relocation of the Republic of China from the mainland to Taiwan. Because Li's saga is so deeply imbued with the unique culture and complex history of Taiwan, an introduction explaining the cultural and historical background of the novel is included to help orient the reader to this amazingly rich cultural context. This informative introduction and the sweeping saga of the novel itself together provide an important view of Taiwan's little known colonial experience.
