Logistics and Transportation Security

Global logistics entails tradeoffs in facility location, distribution networks, the routing and scheduling of deliveries by different modes of travel (e.g., air, water, truck, rail), procurement, and the overall management of international supply chains. In an increasingly global economy, then, logistics has become a very important matter in the success or failure of an organization. It is an integral part of supply chain management that involves not just operations management considerations, but production engineering and regional science issues as well. As Director of the prestigious Waterloo Management of Integrated Manufacturing Systems Research Group (WATMIMS), which specializes in logistics and manufacturing, Jim Bookbinder is uniquely qualified to edit a handbook on global logistics. He has aligned a set of prominent contributors for this volume. The chapters in the Handbook are organized into discrete sections that examine

modes; logistics in particular countries; operations within a free-trade zone; innovative features impacting international logistics; case studies of specific companies; and a look toward the future. Contributors are from the Americas, Europe, and Asia, and they push the state of the art in areas such as trade vs. security; border issues; cabotage within NAFTA; Green logistics corridors within the EU; inland ports; direct-to-store considerations; and all the questions that need to be confronted in any given region. This will certainly appeal to researchers and practitioners alike, and could serve as required or supplementary reading in graduate-level logistics courses as well.

R.O.T.C. Manual: Infantry

This series of monographs is dedicated to the increasingly vital area of prevention in healthcare. The works are organized into four categories of preventive practice: education, social competency enhancement, natural caregiving, and systems change. Tragedy should not and need not occur before a school or community begins making efforts to prevent violence. This volume describes the steps taken by Responding In Peaceful and Positive Ways (RIPP), a program developed to promote 'non-violence' among students in middle schools. RIPP provides young people with new ways to respond to conflict. Using the acronym RAID, the students are taught four types of non-violent options: Resolve, Avoid, Ignore, and Diffuse. By teaching that they have other choices in any conflict, the idea that 'fighting' is a necessary response to an insult or a conflict is dispelled. RIPP also teaches the need for everyone to accept differences, to affirm those with whom they come in contact, and not to engage in 'put downs' of others. This empirically validated program has been proven to work in a variety of settings and was designed with real-life experiences in mind. It was originally developed and implemented in collaboration with school administrators in both urban and rural settings.

Promoting Non-Violence in Early Adolescence

Army experience with a small mechanized stock accounting system, the NCR 500, was studied with respect to personnel and training, in order to improve implementation of newer and more complex computer-based logistics systems. Officers and enlisted personnel in various duty positions connected with NCR 500 systems in four Far Eastern commands were interviewed. Data showed there had been a continual input of underskilled personnel into nearly all of the duty positions in the mechanized stock accounting system and at its major interfaces. Interviews indicated that efficiency would have been promoted by (a) integrating NCR 500 procedures and concepts with repair parts supply procedures and concepts, (b) a total systems approach to training, (c) upgrading the storage operation as well as the supporting stock accounting system, (d) assigning more well-qualified technical supply officers, and (e) training in the NCR 500 system for more noncommissioned officers with repair parts supply experience.
