American performance and the V-8 engine are inextricably linked. Ever since the first mass-produced automobile V-8 was introduced by Cadillac in 1914, the V-8 has been the engine of choice for America's most powerful vehicles—race cars, luxury cruisers, hot rods, and pick-up trucks. This is particularly true for the post WWII period, which is the focus of Ultimate American V-8 Engine Data Book. Every American V-8 ever produced for passenger car use since 1949 is covered in this exhaustive guide, which presents complete listings of V-8 specifications through the 2009 model year. Each listing provides general specs for the engine, as well as part numbers for basic engine components—for vehicles from that first Cadillac to the latest star of NASCAR. The book includes details on displacement, horsepower, torque, carburetion and fuel injection, compression ratio, internal dimensions, and virtually every other specification of value to collectors, mechanics and builders, and enthusiasts.

Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles evaluates various technologies and methods that could improve the fuel economy of medium- and heavy-duty vehicles, such as tractor-trailers, transit buses, and work trucks. The book also recommends approaches that federal agencies could use to regulate these vehicles' fuel consumption. Currently there are no fuel consumption standards for such vehicles, which account for about 26 percent of the transportation fuel used in the U.S. The miles-per-gallon measure used to regulate the fuel economy of passenger cars. is not appropriate for medium- and heavy-duty vehicles, which are designed above all to carry loads efficiently. Instead, any regulation of medium- and heavy-duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers, such as gallons per ton-mile, a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile. This is called load-specific fuel consumption (LSFC). The book estimates the improvements that various technologies could achieve over the next decade in seven vehicle types. For example, using advanced diesel engines in tractor-trailers could lower their fuel consumption by up to 20 percent by 2020, and improved aerodynamics could yield an 11 percent reduction. Hybrid powertrains could lower the fuel consumption of vehicles that

stop frequently, such as garbage trucks and transit buses, by as much 35 percent in the same time frame.

Riding High is packed with untold episodes from the Jupiter journey of Ted Simon's book Jupiter's Travels: his confrontations with a murderous military in Chile, his farcical arrest in India, bizarre customs in Thailand and Malaysia, his hilarious entanglements with a bottle of bad Dubonnet in Ecuador, and many more. Simon contrasts them with the touching and turbulent events that followed his return to domesticity, and explains what became of him in 'life after travel.'

Published in honour of Professor Yasir Suleiman, this collection acknowledges his contribution to the field of language and society in general, and to that of language analysis of socio-political realities in the Middle East in particular. Presenting a range of case studies relating to the role of language in the Middle East, each shows that the study of language unearths deeper processes relating to political affiliations, social behaviour and transnational as well as religious and sectarian identities. It also explores questions related to the power of language as a socio-political instrument, and addresses current issues that facilitate an understanding of the evolving intersections in the areas of language and politics in the modern Middle East. This includes how language forms and is shaped by its social and political surroundings, the language manifestations of social, religious and political identifications, as well as groupings, divisions and polarisations in the encounter between language, conflict and politics in contemporary Middle Eastern communities. Looking at language as a proxy for social and political struggles, the volume gives prominence to the long-lasting legacy and great contribution of Professor Yasir Suleiman to the field.

S38b and S100 E-boats class were German fast attack craft (Schnellboot in German) built for the Kriegsmarine during World War Two. The E-boats (a British designation using the letter E for Enemy) were defined by many naval experts as the best carrying out of their category. Initially these units were called Unterseeboot Zerstörer (Hunting Submarine) and Anti-Submarine Motorboats or Armored Motorboats, as they had an important anti-submarine mission. Later the Kaiserliche Marine (imperial German navy) adopted the designation of Luftschiffmotorenboot (boat with an airship engine) or L-Boote and, therefore, from November 1917, the units became LM-Boote, with the same meaning, but their use, especially in the Baltic Sea and the North Sea, was not particularly successful.

Anybody who wanted to go toe to toe with the Big Three in the 1960s had to produce credible muscle cars. American Motors Corporation did exactly that with the SC Rambler and the incredibly fast AMX. Some argue, however, that AMC's insistence on pouring its relatively limited resources into the "muscle wars" ultimately led to its demise. Illustrated throughout with modern photography of restored and factory-original cars, archival images, AMC concept drawings, period

advertisements, and cutaway illustrations, this color history primarily focuses on the conception, development, production, and performance of the AMX, as well as the Javelin upon which it was based. Special models like the Mark Donohue Signature Edition Javelin, along with the less-than-well-received Marlin, Rebel, SST, Hornet 360, Gremlin X, and others are also included.

Pictorial History of Japanese Motorcycles

The Type XXI U-Boot

In 1982, at the age of just twenty-three and halfway through her architecture studies, Elspeth Beard left her family and friends in London and set off on a 35,000-mile solo adventure around the world on her 1974 BMW R60/6. Reeling from a recent breakup and with only limited savings from her pub job, a tent, a few clothes and some tools, all packed on the back of her bike, she was determined to prove herself. She had ridden bikes since her teens and was well travelled. But nothing could prepare her for what lay ahead. When she returned to London nearly two and a half years later she was stones lighter and decades wiser. She'd ridden through unforgiving landscapes and countries ravaged by war, witnessed civil uprisings that forced her to fake documents, and fended off sexual attacks, biker gangs and corrupt police convinced she was trafficking drugs. She'd survived life-threatening illnesses, personal loss and brutal accidents that had left permanent scars and a black hole in her memory. And she'd fallen in love with two very different men. In an age before email, the internet, mobile phones, satnavs and, in some parts of the world, readily available and reliable maps, Elspeth achieved something that would still seem remarkable today. Told with honesty and wit, this is the extraordinary and moving story of a unique and life-changing adventure.

Fleet Owner

'A highly readable and spiritually uplifting book about a dream come true' Wanderlust 'Touching and memorable one for armchair travellers and bike freaks' Daily Mail From London to New York, Ewan and Charley chased their shadows through Europe, the Ukraine, Kazakhstan, Mongolia and Russia, across the Pacific to Alaska, then down through Canada and America. But as the miles slipped beneath the tyres of their big BMWs, their troubles started. Exhaustion, injury and accidents tested their strength. Treacherous roads, unpredictable weather and turbulent politics challenged their stamina. They were chased by paparazzi in Kazakhstan, courted by men with very large guns in the Ukraine, hassled by the police, and given bulls' testicles for supper by Mongolian nomads. And yet despite all these obstacles they managed to ride more than twenty thousand miles in four months, changing their lives forever in the process. As they travelled they documented their trip, taking photographs, and writing diaries by the campfire. Long Way Round is the result of their adventures - a fascinating, frank and highly entertaining travel book about two friends riding round the world together and, against all the odds, realising their dream.

4WD Driving Skills

Ted Simon is the author of the classic travel book JUPITER'S TRAVELS. It documents his four-year journey round the world by motorbike, travelling through Europe, Africa, South and North America, and Asia. A number one bestseller in the late 1970s, it is still regarded as one of the greatest motorcycle books - indeed, one of the greatest travel books - ever written. In 2001,

at the age of 69, Ted Simon decided to retrace his journey, and DREAMING OF JUPITER is the result. It took him two and a half years - during which time he revisited all the countries he had travelled through in the 1970s. He found much had changed, and he reflects upon the increased poverty, political upheavals, environmental issues and indeed the changes in himself. But ultimately, DREAMING OF JUPITER is a hugely inspiring read with a positive message at its heart - that even at the age of 70 you can still set off on an adventure, and be surprised and excited by what life throws at you along the way.

World Wastes

The Type XXI U-boot was one of the few types of weapon that, despite being unable to take part in combat, completely changed the character of naval actions at sea. It was the first true submarine in history. The other types of vessels designed so far were basically "diving ships" that might have been underwater for some time, but most of the time they had to be on the surface because their underwater range was severely limited. Under water they were slow and not maneuverable, and often had to emerge onto the surface to charge their electric batteries. The Type XXI was designed from the outset as a true submarine whose natural environment was to be the deep seas.
