the author's knowledge, no monograph or book has addressed nutrition support of cancer and transplant patients together. Experts from the around the world have addressed the nutrition support in cancer and transplant patients in this unique monograph. The book is divided in two parts: Part I deals with nutrition support in cancer patients, including the specific role of nutrition on immunity, cancer cachexia, and the role of different substrates. Part II addresses nutrition in transplant patients. The first two chapters deal with the immunologic role of nutrition and cancer cachexia. Chapter 3 elegantly and extensively reviews the nutritional implications; its biochemistry and the role of one of the most studied amino acids in clinical practice—glutamine. This is followed by two chapters of nutrition support of patients with head and neck cancer and nutrition support of patients with gastrointestinal cancer. Chapters 6 and 7 review the role of total parenteral nutrition on perioperative nutritional support and cell cycle kinetics. While the plasma amino acids profile in cancer patients and the role of L-methionine is addressed in great details in Chapters 8 and 9, the role of ornithine alpha-ketoglutarate administration on surgical, trauma and cancer-bearing patients is reviewed on Chapter 10. Part Two of this book starts with the review of nutritional support in small bowel transplantation. This Section elegantly describes the process of recovery of small bowel from the ischemia and preservation, weaning from parenteral nutrition support and establishment of normal diets. In addition monitoring techniques and the nutritional complications of surgical intervention is described. Chapter 12 on liver failure and liver transplant

patients addresses hepatic encephalopathy and the role of certain amino acids, nutrition assessment techniques and metabolic changes following liver transplantation. Furthermore, it offers some practical advice on how to establish nutrition support routes in these very ill patients. Nutrition support in renal transplantation, including metabolic abnormalities in renal failure, are described on Chapter 13. This monograph ends with a Chapter on total parenteral nutrition in bone marrow transplant patients.

Practical Aspects of Nutritional Support

This text provides a review of the current knowledge in both the mechanics of nourishing the critically ill and the metabolic and immunological roles nutrients play. In-depth chapters discuss disease-related malnutrition as distinct from under-or-over nourishment and the impact of nourishment in either form of malnutrition. The appropriate timing and indications for nutrition support are provided as well as advanced techniques for improving practice. A broad range of issues related to interdisciplinary practice are addressed. Useful for a wide variety of practitioners, including ICU doctors, hospitalists, and nutrition support physicians, *Nutrition Support of the Critically Ill* provides practical bedside advice and simplified recommendations for practice.

Henry's Clinical Diagnosis and Management by Laboratory Methods E- Book

The Practical Handbook of Nutrition in Clinical Practice is an excellent supplement to standard textbooks in nutrition support and a must-have reference for those with an interest in this area. The text reviews nutrition assessment techniques from the very basic to the latest research methods. The areas of malnutrition and refeeding are explored as are overnutrition and obesity. Enteral access techniques and enteral nutrition are expertly covered. The history and current practice of total parenteral nutrition are discussed by one of the modern-day developers of this lifesaving technique. The role of managed care in nutrition is a timely chapter with current health care reform in mind. Nutritional immunology, nutrition in renal disease, nutrition fraud and ethical issues in nutrition support, along with nutrition support in short bowel syndrome and the surgical patient, are all discussed in detail.
