Essentials of Psychiatric Mental Health Nursing

The third edition of Psychiatric Care of the Medical Patient brings a classic reference text into the twenty-first century. It combines critical scholarship with the voice of expert clinicians who work at the interface of psychiatry with medical specialties. It is meant to be read for pleasure as well as consulted as a reference. The editors have worked with the authors to bring a consistent perspective to the book - one that sees the medical psychiatrist as an agent for bringing a more comprehensive perspective to medical care. Even seasoned and knowledgeable practitioners will find much that is new to them in this book. The volume covers topics in depth that other books in the field may not cover at all, such as the use of herbal and nutritional therapies for medical-psychiatric symptoms and syndromes, and the choice of questionnaires to supplement history-taking. It looks at old topics in a new way: The chapter on the physical examination applies psychometric considerations to the Babinski sign, describes the method and application of quantitative bedside olfactory testing, and discusses smartphone apps to improve the sensitivity of the examination. Psychiatric Care of the Medical Patient, 3rd Edition provides concepts and information to facilitate the dialogue between psychiatrists and general medical specialists - minimizing psychiatric jargon and speaking in the common language of caring and curious physicians.

Psychiatric Nursing - eBook

In this book we have attempted to identify skills which are needed by the psychiatric nurse, and in doing so to identify a body of knowledge unique to the professional psychiatric nurse. The book has been written to demonstrate the basis

of a skills approach for both the experienced and the inexperienced nurse to build upon, for we believe that psychiatric nurses, due to both their training and their particular mixture of interests, are well equipped to be in the forefront of psychiatry as a developing art and science. We hope that this book in some small way helps this development. Some of the more recent advances in psychiatric nursing have been reinforced by the publication of a training syllabus for mental nurses (English and Welsh National Boards, 1982). This document highlights the need for a change from a medical model to a social model and from a task-oriented learning experience to a skills approach. We have attempted to reflect this change in emphasis by including such aspects as personal development and self-awareness, human sexuality, the nursing process and counselling skills.
