(Clayton Christensen, Professor, Harvard Business School, and author of "The Innovator's Dilemma). Do you remember the last major initiative you watched die in your organization? Did it go down with a loud crash? Or was it slowly and quietly suffocated by other competing priorities? By the time it finally disappeared, it's likely no one even noticed. What happened? Dealing with Project Management Challenges through effective Project Leadership

With the majority of IT projects being delivered late, over budget, or cancelled altogether, it is clear that traditional project management methodologies do not provide an effective framework for today's IT projects. It is evident that a new Return-on-Investment (ROI) oriented approach is required that focuses on the ROI of a project fro

This book looks at the state of governance in countries of Developing Asia, ie, the poorer countries in the region and those with inadequate creditworthiness and with risk of debt stress. It assesses the state of public sector management and their attempts at governance reforms in these countries. It further considers the space for these countries to initiate and sustain reforms in a few key areas of public policy, including (i) generating more resources domestically; (ii) reforming the state-owned enterprises so that primarily governments do not lose a lot of resources in the form of subsidies; (iii) strengthening local governments so that services can be provided more effectively; and (iv) strengthening the agencies of government such that public sector

functions, such as service delivery, are better and more effectively delivered. The book's main conclusion is that while countries in Developing Asia have had difficulties in instituting governance and public sector reforms, the scope for doing so has never been better.

Project Management Case Studies

Public resources - if invested well in public infrastructure and services - can catalyze private and community efforts and unleash an inclusive growth and development process. But public investment attracts political interest, usually of the kind that undermines efficiency. Too often public projects are poorly designed, under-funded, long-delayed, or badly implemented, with little benefit to the population. This is a critical challenge for many countries, both rich and poor. Paradoxically, some countries are even unable to spend their limited investment budgets while others lack "shovel ready" projects for a fiscal stimulus. The quality of institutions is fundamental. This book identifies eight key institutional features that countries need to adopt to ensure that public investments support growth and development. Very broadly, the eight stages correspond to a disciplined system for guiding, appraising, reviewing and selecting projects that are most likely to stimulate inclusive development, and following through to ensure that they are implemented, adjusted, operated and evaluated to deliver the public services that citizens and the private sector expect. A review of over 30 countries suggests that these eight features

are present in all countries that manage resources efficiently but most countries are missing key features. Not surprisingly, those weaknesses contribute to poor investment and development outcomes. Strengthening institutions for public investment management is critical to developmental success. This book provides a clear, non-technical discussion on approaches to improving project appraisal, dealing with uncertainty (an issue that is likely to grow in importance with the effects of climate change), integrating procurement skills into project design and implementation, and of managing the decision on public private partnerships. By providing a simple but comprehensive framework and global experience, the book provides policy makers the guidance to adopt good functional principles in the design of institutions to strengthen public investment management.

The business of government is necessarily diverse, changing and of considerable scale. A focus on improving the implementation of government programs and initiatives is important because the community expects the Government to deliver on its policies, as does the Government. The papers included in this collection address numerous aspects of improving implementation. They were initially presented at the Project Management and Organisational Change conference held in Canberra in February 2006, the first annual research conference organised by ANZSOG in conjunction with the Department of the Prime Minister and Cabinet. This collection represents a comprehensive drawing together of experience and insight from both practitioners and academic researchers, with speakers including top public sector executives from the Australian jurisdictions as well as representatives from the United Kingdom, Canada and New Zealand.

Governance Frameworks for Public Project Development and Estimation

Research Paper from the year 2013 in the subject Business economics - Business Management, Corporate Governance, grade: A, Atlantic International University, course: Project Leadership, language: English, abstract: Leadership is a crucial component of project management in any development sector. However, the construction sector in developing countries has features and processes that make leadership even more vital. Construction projects by governments demand huge financial and technical resources and the project teams are usually large and diverse. The process of project construction management is long and involves a large number of separate and connected tasks. Good leadership is also crucial in government construction projects since poor performance can have negative repercussions for the nation and the general population. Thus, effective leadership is essential and can provide answers to the many challenges that the construction sector faces which has long term socioeconomic implications for developing countries. This paper investigates the challenges that are faced by government initiated construction projects in developing countries and suggests possible ways of addressing them through

effective leadership. Several studies have been undertaken to investigate factors leading to low productivity, cost overruns and hazards among other challenges in specific construction projects but less has been done to discuss the general challenges facing construction projects. In doing this, attention should be paid to contexts because they differ. This prompted me to study the Zimbabwean case.

In a global world, where the acceleration of technological changes is happening in all industrial sectors, a special focus is forced on innovation and creativity. The book has gathered a small number of sectors where innovation is being the main vector to achieve the competitiveness that companies are craving. The motivation to choose these sectors has been preceded by a careful selection in which we wanted to pick up those in which innovation is a key today. Different aspects push to create and innovate: the environment in general and in particular climate change is forcing to rethink sectors such as energy, infrastructure, water, biotechnology, materials, defense, education, or health. Dear reader, in your hand is a work that reflects the same spirit of the human being: curiosity and eagerness to overcome have allowed humanity to have evolved and still continue today.

In 1997, Congress, in the conference report, H.R. 105-271, to the FY1998 Energy and Water Development Appropriation Bill, directed the National Research Council (NRC) to carry out a series of assessments of project management at the Department of Energy (DOE). The final report in that series noted that DOE lacked an objective set of measures for assessing project management quality. The department set up a committee to develop performance measures and benchmarking procedures and asked the NRC for assistance in this effort. This report presents information and guidance for use as a first step toward development of a viable methodology to suit DOE's needs. It provides a number of possible performance measures, an

Governance Frameworks for Public Project Development and Estimation includes a thorough investigation into theoretical perspectives and theories, mainly from economy and social sciences. Thirty-two aspects of theory are assessed, and it is indicated whether each framework design seems to have put weak or strong emphasis on each of these aspects. The purpose of the report is to seek better understanding of how the governance framework and the projects interact and how the framework influences the project. Governance frameworks help to improve the initial and fundamental design of projects as well as avoid some of the common problems related to the implementation of projects. Implementation of governance frameworks represents a potential for considerable savings and added value by making cost estimation and time planning more effective.

The Balanced Scorecard translates a company's vision and strategy into a coherent set of performance measures. The four perspectives of the scorecard--financial measures, customer knowledge, internal business processes, and learning and growth--offer a balance between short-term and long-term objectives, between outcomes desired and performance drivers of those outcomes, and between hard objective measures and softer, more subjective measures. In the first part, Kaplan and Norton provide the theoretical foundations for the Balanced Scorecard; in the second part, they describe the steps organizations must take to build their own Scorecards; and, finally, they discuss how the Balanced Scorecard can be used as a driver of change.
