YOU CAN'T MAKE THIS STUFF UP! Here is a hilarious collection that catches real-life
knuckleheads in outrageous acts of brazen stupidity, giving new meaning to that
famous four-letter word: "DUH"! * The Oregon resident who was waxing his 1984
Pontiac--and somehow managed to shove the antenna up his nose . . .
GRANDMOTHER OF EIGHT MAKES HOLE IN ONE * The Atlanta Braves pitcher who
was treated for five-inch-long welts after he tried to iron his polo shirt while
wearing it . . . MINERS REFUSE TO WORK AFTER DEATH * The inmate at a
Chesapeake Correctional Facility who filed a five million dollar lawsuit against
himself . . . DRUNK GETS NINE MONTHS IN VIOLIN CASE * The woman who couldn't
stand the discomfort of having a callus on her right foot, so she blew off her big toe
with a shotgun . . . Radio personality John "Kato" Machay's lively compilation of
news stories, headlines, and courtroom gaffes proves hands down that truth is
dumber than fiction! REMEMBER: To err may be human, but to laugh out loud is
divine.

A Study Guide and a Teacher's Manual Gospel Principles was written both as a
personal study guide and as a teacher's manual. As you study it, seeking the Spirit
of the Lord, you can grow in your understanding and testimony of God the Father,
Jesus Christand His Atonement, and the Restoration of the gospel. You can find
answers to life's questions, gain an assurance of your purpose and self-worth, and
face personal and family challenges with faith.

IPhone: The Missing Manual

I am pleased to present a work which marks a milestone in the history of public
works and, more precisely, in that of permanent structures—a comprehensive
dictionary of Civil Engineering terms. Since the beginning of time, Man has always
tried to find a means to clear the obstacles which nature erected to displace him.
With the first tree trunk thrown across a river, man sought to improve the crossing

structure. After the invention of the wheel, and to satisfy his thirst for conquest (Roman ways), and comfort (aqueducts), man built bridges that became a preremptory necessity to move quickly. Thus, Man started to build wooden and masonry works. With the passing centuries, the builders became masters in the art of building masonry works. Then came the Industrial Revolution and the advent of the steel (1864), which was closely followed by the invention of the reinforced concrete (1855). The need for railways and improving the road network inspired great works of crossing such as viaducts and tunnels. The boom of the railway network and the development of the car required the construction of an increasing number of new structures. This phenomenon continues today with hundreds of structures built each year throughout the world.

Handbook of Electrical Installation Practice covers all key aspects of industrial, commercial and domestic installations and draws on the expertise of a wide range of industrial experts. Chapters are devoted to topics such as wiring cables, mains and submains cables and distribution in buildings, as well as power supplies, transformers, switchgear, and electricity on construction sites. Standards and codes of practice, as well as safety, are also included. Since the Third Edition was published, there have been many developments in technology and standards. The revolution in electronic microtechnology has made it possible to introduce more complex technologies in protective equipment and control systems, and these have been addressed in the new edition. Developments in lighting design continue, and extra-low voltage luminaires for display and feature illumination are now dealt with, as is the important subject of security lighting. All chapters have been amended to take account of revisions to British and other standards, following the trend to harmonised European and international standards, and they also take account of the latest edition of the Wiring Regulations. This new edition will provide an invaluable reference for consulting engineers, electrical contractors and factory plant engineers.

Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center

Inspired by a voracious curiosity about humans and other subjects, the poems in Heather Christle's *What Is Amazing* describe and invent worlds in an attempt to understand through participation. The book draws upon the wisdom of foolishness and the logic of glee, while simultaneously exploring the suffering inherent to embodied consciousness. Speakers play out moments of bravado and fear, love and mortality, disappointment and desire. They socialize incorrigibly with lakes, lovers, fire, and readers, reasoning their way to unreasonable conclusions. These poems try to understand how it is that we come to recognize and differentiate objects and beings, how wholly each is attached to its name, and which space reveals them. *What Is Amazing* delights in fully inhabiting its varied forms and

voices, singing worlds that often coincide with our own.

Corporate Responsibility Coalitions

The significance of business-led corporate responsibility coalitions is indisputable. The WBCSD has 200 member companies with combined annual revenues of US\$7 trillion; the UN Global Compact has almost 8,000 corporate members, over two-thirds of them from developing countries. It is estimated that there are more than 110 national and international generalist business-led CR coalitions. But there is now urgent need for informed and balanced analysis of their achievements, their progress and their potential. Why did these coalitions start and grow? What have been their impacts? Where are they heading now? Where should they be going? What is the future? In a period of austerity, the business and public sector must decide whether funding these coalitions is a priority. To meet current crises, there will have to be a great deal more business involvement; but efforts of individual corporations will not be sufficient. There is also a need for far more collective action among companies and more collaborative action between different sectors of society. Business-led CR coalitions with their decades of convening experience could play an important role in this process - if they are fit for purpose going forward. Authors David Grayson and Jane Nelson have been actively involved in such coalitions for decades. In *Corporate Responsibility Coalitions* they first explore the past, present and future of these coalitions: the emergence of new models of collective corporate action over the past four decades; the current state of play, and the increasing number, diversity and complexity in terms of how they not only network with each other but also engage in a much broader universe of institutions that are promoting responsible business practices. In addition, the book provides in-depth profiles of the most strategic, effective and long-standing coalitions, including: Business for Social Responsibility; Business in the Community; CSR Europe; Instituto Ethos; International Business Leaders Forum; the UN Global Compact; and the WBCSD. This book will be required reading for key supporters and potential partners of such coalitions in companies, governments, international development agencies, foundations, non-governmental organizations, academic institutions and think-tanks. It also aims to inspire a future generation of leaders to be more aware of the role of business as a partner in driving more inclusive, green and responsible growth, and to help them develop new types of leadership skills so that they can be effective in finding multi-stakeholder solutions to complex and systemic challenges.
