Continuum mechanics underlies many geological and geophysical phenomena, from earthquakes and faults to the fluid dynamics of the Earth. This interdisciplinary book provides geoscientists, physicists and applied mathematicians with a class-tested, accessible overview of continuum mechanics. Starting from thermodynamic principles and geometrical insights, the book surveys solid, fluid and gas dynamics. In later review chapters, it explores new aspects of the field emerging from nonlinearity and dynamical complexity and provides a brief introduction to computational modeling. Simple, yet rigorous, derivations are

used to review the essential mathematics. The author emphasizes the full three-dimensional geometries of real-world examples, enabling students to apply this in deconstructing solid earth and planet-related problems. Problem sets and worked examples are provided, making this a practical resource for graduate students in geophysics, planetary physics and geology and a beneficial tool for professional scientists seeking a better understanding of the mathematics and physics within Earth sciences.

Is construction grammar a useful framework for the study of language change? Hilpert combines the current linguistic theory of construction grammar with advanced corpus-based methodology in order to study language change in a new way. This new perspective has wide-ranging consequences for the way historical linguists think about language change.

Moody's Public Utility Manual

This was one of the first books to appear after the sinking of the Titanic, published just 37 days after the disaster, and despite the haste it is one of the most stylish and well-written of the early works. Its author, Filson Young, was a respected journalist who had already used his columns in the London Saturday Review and the Pall Mall Gazette to call for better safety at sea, and for all ships to have properly-manned radios. Having sailed the Atlantic himself, and knowing several of the passengers on board the doomed liner, his book combines an imaginative telling of the first few days on board, with a vivid account of the sinking based on early survivor interviews. In 1932 the BBC asked Filson to dramatise the book for radio, but a public outcry forced them to reconsider: even after twenty years, his

recreation of the sinking was still too powerful for many of their audience.
