Production and Operations Management

Creating Breakthrough Products describes the new forces driving product development that companies must master if they want to lead and innovate. It is a step-by-step guide to the new ideal in product development.

Hi-fi News & Record Review

Strategy is the art of creating value. It provides frameworks, conceptual models, and governing ideas that allow a company's managers to identify opportunities for bringing value to customers and for delivering that value at a profit. This book illustrates how new ways of creating value are being created by current global competition, changing markets, and new technologies. It shows how the focus of strategic analysis should not be the company or the industry, but the value-creating system itself, within which suppliers, business partners, allies, and customers work together to co-produce value.

Wars throughout history have been fought in the name of ideology, religion and the pursuit of peace. Our thinking about war – when it is justified, how it should be fought and how it is perceived – has changed dramatically over time. Whereas in the past war has been seen as a battle of wills, this provocative and illuminating new book shows how war has evolved into an exercise in risk management. In a rare blend of political science, sociology, history and cultural thought, Christopher Coker peels away the layers of meaning shrouding our current understanding of war and warfare. Using the ideas of writers such as Zygmunt Bauman, Ulrich Beck and Frank Furedi, he shows that risk has become the language of business, politics and public policy and so we should not be surprised that it has now become the language of war. The book highlights the increasing difference between homeland security and national security in the modern world, arguing that the defense of the citizen is often now more challenging than the defense of the state. By demonstrating the changing character and complexity of conflict from World War I

to the current the current fight against terrorism, the book provides a powerful and highly distinctive account of the re-branding of war in an age of risk. This book is set to ignite debate amongst students and scholars of international politics as well as appealing to anyone interested in war and its place in contemporary society.

High Fidelity News and Record Review

Using the authors' clinical practices and their teaching experiences, along with a series of quotes from movies, TV, advertising and music, this book will help the reader navigate real-world issues. For instance, "Show me the money," from Jerry Maguire, offers sound financial advice, and "Frankly, my dear, I don't give a damn," from Gone with the Wind, provides insight about love and loss. These references from popular culture help clarify and instruct; they also explain that the prevalence of images, sounds, and words that surround us have something to offer. Indeed, the book allows the authors to come from behind their couches and give direct practical advice, as well as information about ourselves, from the everyday echoes of popular culture. <http://www.psychologytoday.com/blog/popular-culture-meets-psychology/200907/self-help-through-popular-culture-i-money>

During the past 20 years, the field of mechanical engineering has undergone enormous changes. These changes have been driven by many factors, including: the development of computer technology worldwide competition in industry improvements in the flow of information satellite communication real time monitoring increased energy efficiency robotics automatic control increased sensitivity to environmental impacts of human activities advances in design and manufacturing methods These developments have put more stress on mechanical engineering education, making it increasingly difficult to cover all the topics that a professional engineer will need in his or her career. As a result of these developments, there has been a growing need for a handbook that can serve the professional community by providing relevant background and current information in the field of mechanical engineering. The CRC Handbook of Mechanical Engineering serves the needs of the professional engineer as a resource of information into the next century.
