Cherry Hill, America's most trusted equine expert, teams up with Richard Klimesh, a professional farrier and her frequent writing partner, to address the twin topics of hoof care and horseshoeing. Proper hoof care is one of the most important contributors to a horse's health and well-being. Without sound, well-maintained hooves, an otherwise healthy horse can become lethargic, grouchy, and sullen. With healthy hooves, a horse's noble personality shines. Horse Hoof Care covers what every horse owner needs to know about this critical key to a horse's overall health and performance. Hill and Klimesh explain the anatomy of the hoof, the role of the farrier, and all the principles of good care and maintenance. They also address the ongoing debate on whether or not to shoe and how to proceed with

either choice. From addressing gait problems to training a horse for shoeing, and from feeding a balanced diet to performing daily hoof checks, if it affects horse foot health, it's covered here. As with many aspects of horse care, daily routines and consistent treatment can prevent future problems, but even with the best care, horses may develop foot ailments. Readers will find comprehensive coverage of lost shoes, hoof cracks, thrush, clubfoot, contracted heels, and many other common problems, along with advice on treatment. A complete chapter on issues that require a veterinarian tells readers exactly what to look for and how to proceed. Horse Hoof Care is the fifth book in Cherry Hill's Horsekeeping Skills Library, dedicated to giving horse owners the information they need to care for horses in every situation.

A ridden horse is an athletic horse, and just as a human athlete needs to gauge his diet, condition his cardiovascular and respiratory systems, and take meticulous care of his muscles, bones, and ligaments, so too must the rider maintain these systems in her horse. Now, for the first time in one, full-color comprehensive book, Dr. Nancy S. Loving, noted equine veterinarian and dressage, event, and distance riding competitor, addresses the singularly challenging needs of keeping the working horse in working order. With chapters devoted to cardiovascular, respiratory, neurological, digestive, and reproductive health, as well to the hooves, bones, joints, tendons and ligaments, muscles, and skin, Dr. Loving provides a thorough understanding of the intricacies of the equine body. However, this is not just another veterinary manual. While diseases are indeed clearly explained, and relevant diagnostic tools and methods of prevention and treatment are offered for various ailments, Dr. Loving sets her book apart by diligently applying her scientific knowledge to the practical needs of every pleasure, sport, and performance horse

This book is the first in a series on the Welfare of Animals, and it is appropriate that it addresses horses, whose welfare in modern management systems are a subject of major concern. Keeping horses is increasingly popular in the Western world and is of major importance in many developing countries. However, the conditions in which horses are kept are very different from the environment of wild horses, which leads to many adverse effects on their welfare and behaviour. This book describes the development of horse behaviour, and the way in which the management of horses today affects their welfare. Horses for sport, companionship and work are considered and ways of improving their welfare by

management of horses from birth to 2 years of age. Pre-purchase examination recommendations are made, specifically those done in the Netherlands and Germany, including that of the high level jumper. How genetics can help to find the ideal horse by noting positive and negative markers of performance and health is shown to be a valuable assessment tool in this process. Finally, topics such as variations among breeds in predisposition to injury, the role of shoes in horse performance, on track diagnosis of upper airways obstructions and equine osteochondrosis genetic markers are covered in the book. The book is a valuable resource to all who want to make informed decisions in the acquisition process of performance horses and manage them for sports.
