The CovidNudge platform was a sensitive, specific, and rapid point of care test for the presence of SARS-CoV-2 without laboratory handling or sample pre-processing. The device, which has been implemented in UK hospitals since May, 2020, could enable rapid decisions for clinical care and testing programmes.

Let a line through the origin intersect the unit circle, making an angle of θ with the positive half of the x-axis. The x- and y-coordinates of this point of intersection are equal to $\cos(\theta)$ and $\sin(\theta)$, respectively. This definition is consistent with the right-angled triangle definition of sine and cosine when $0^\circ < \theta < 90^\circ$: because the length of the hypotenuse of the unit circle is always

Suicide rates in Japan have jumped in the second wave of the COVID-19 pandemic, particularly among women and children, even though they fell in the first wave when the government offered generous handouts to people, a survey found. The July-October suicide rate rose 16% from the same period a year earlier, a stark reversal of the February-June decline of 14%, according to the study by

Sound: StudyJams! Science | Scholastic.com

Power is the rate at which work is done, $P = w/t$, or work per unit time. The watt (W) is the unit for power and is equal to 1 joule (or newton-meter) per second. Horsepower (hp) is another familiar unit of power used primarily for rating internal combustion engines. A 1 hp machine does 550 ft·lb of work in 1 second and 1 hp equals 746 watts.

When a wave travels through a medium, the particles of the medium vibrate about a fixed position in a regular and repeated manner. The period describes the time it takes for a particle to complete one cycle of vibration. The frequency describes how often particles vibrate - i.e., the number of complete vibrations per second. These two quantities - frequency and period - are mathematical

Wave power is the capture of energy of wind waves to do useful work - for example, electricity generation, water desalination, or pumping water. A machine that exploits wave power is a wave energy converter (WEC).. Wave power is distinct from tidal power, which captures the energy of the current caused by the gravitational pull of the Sun and Moon. Waves and tides are also distinct from ocean

8th Grade Science Waves Unit Information

Waves involve a transport of energy from one location to another location while the particles of the medium vibrate about a fixed position. Two common categories of waves are transverse waves and longitudinal waves. The categories distinguish between waves in terms of a comparison of the direction of the particle motion relative to the direction of the energy transport.
