Paddlefish have become of increasing interest to the aquaculture community in recent years, particularly as a potential new source of seafood and caviar. Native to North America, paddlefish show great promise both domestically and internationally as a commercially viable farmed species. Paddlefish Aquaculture examines all aspects of the biology and culture of these fish, exploring their physiology, production, end products and the economics underlying a successful paddlefish operation. Chapters specifically cover paddlefish biology, propagation and early culture techniques, production for meat and caviar, international culture and history, paddlefish food products, bioaccumulants of contaminants in paddlefish, parasites and diseases, and the economics of paddlefish aquaculture. Our species is misnamed. Though sapiens defines human beings as "wise" what humans do especially well is to prospect the future. We are homo prospectus. In this book, Martin E. P. Seligman, Peter Railton, Roy F. Baumeister, and Chandra Sripada argue it is anticipating and evaluating future possibilities for the guidance of thought and action that is the cornerstone of human success. Much of the history of psychology has been dominated by a framework in which people's behavior is driven by past history (memory) and present circumstances (perception and motivation). Homo Prospectus reassesses this idea, pushing focus to the future front and center and opening discussion of a new field of Psychology and Neuroscience. The authors delve into four modes in which prospection operates: the implicit mind, deliberate thought, mind-wandering, and collective (social) imagination. They then explore prospection's role in some of life's most enduring questions: Why do people think about the future? Do we have free will? What is the nature of intuition, and how might it function in ethics? How does emotion function in human psychology? Is there a common causal process in different psychopathologies? Does our creativity change with age? In this remarkable convergence of research in philosophy, statistics, decision theory, psychology, and neuroscience, Homo Prospectus shows how human prospection fundamentally reshapes our understanding of key cognitive processes, thereby improving individual and social functioning. It aims to galvanize interest in this new science from scholars in psychology, neuroscience, and philosophy, as well as an educated

public curious about what makes humanity what it is.

'An excellent read' - Rugby World Rob Andrew is one of the key figures in modern rugby history: an outstanding international who won three Grand Slams with England and toured twice with the British and Irish Lions, he also played a central role in the game's professional revolution with his trailblazing work at Newcastle. During a long spell on Tyneside, he led the team to a Premiership title at the first opportunity, brought European action to the north-east and gave the young Jonny Wilkinson his break in big-time union by fast-tracking him into the side straight out of school. What happened off the field was equally eventful. Rob produced 'The Andrew Report' - the most radical of blueprints for the future of English rugby - and then, over the course of a decade as one of Twickenham's top administrators, found himself grappling with the extreme challenges of running a game repeatedly blown off course by the winds of change. He did not merely have a ringside seat as one of the world's major sports went through its greatest upheaval in a century: more often than not, he was in the ring itself.
