After the heir to a frozen-food fortune gets iced, Nero Wolfe's right-hand man becomes a suspect:"Goldsborough does a masterly job with the Wolfe legacy" (Booklist). When Lily Rowan doesn't laugh at his jokes, Archie Goodwin knows something's wrong. Her niece Noreen has been running around with Sparky Linville, a club-hopping bad boy who's the terror of Manhattan nightlife, and the last time she went out with him, Noreen wasn't herself when she came home. All she would tell her aunt was that she had been assaulted. Springing into action, Goodwin waits for Linville outside of Morgana's, a chrome-and-glass palace that sits like a wart on Second Avenue. They nearly come to blows, but Linville's bodyguard intervenes, and Goodwin retreats to plan his next move. In the morning, Linville is dead, and Goodwin is the chief suspect. For years he has helped rotund genius Nero Wolfe out of jams, and now it's time for the master detective to return the favor.

The popularity of The Seven Deadly Sins dates back to the 4th Century. They enjoyed tremendous notoriety during the period we call the Middle Ages. While the popular assortment of sins is not directly from scripture, they have been the subject of many a sermon, lecture, writing and art.In his book The Seven Deadly Sins: And Why We Love Them, Steinbacher examines each in detail. He gives examples of how they effect us and how we conduct ourselves in this world.Included in this book is Steinbacher's essay,An Angel In My Garden.

India's history and culture is ancient and dynamic, spanning back to the beginning of human civilization. Beginning with a mysterious culture along the Indus River and in farming communities in the southern lands of India, the history of India is punctuated by constant integration with migrating peoples and with the diverse cultures that surround the country. Placed in the center of Asia, history in India is a crossroads of cultures from China to Europe, as well as the most significant Asian connection with the cultures of Africa. The Historical Dictionary of Ancient India provides information ranging from the earliest Paleolithic cultures in the Indian subcontinent to 1000 CE. The ancient history of this country is related in this book through a chronology, an introductory essay, a bibliography, and hundreds of cross-referenced dictionary entries on rulers, bureaucrats, ancient societies, religion, gods, and philosophical ideas.

In order to apply the damage tolerance design philosophy to design marine structures, accurate prediction of fatigue crack growth under service conditions is required. Now, more and more people have realized that only a fatigue life prediction method based on fatigue crack propagation (FCP) theory has the potential to explain various fatigue phenomena observed. In this book, the issues leading towards the development of a unified fatigue life prediction (UFLP) method based on FCP theory are addressed. Based on the philosophy of the UFLP method, the current inconsistency between fatigue design and inspection of marine structures could be resolved. This book presents the state-of-the-art and recent advances, including those by the authors, in fatigue studies. It is designed to lead the future directions and to provide a useful tool in many practical applications. It is intended to address to engineers, naval architects, research staff, professionals and graduates engaged in fatigue prevention design and survey of marine structures, in fatigue studies of materials and structures, in experimental laboratory research, in planning the repair and maintenance of existing structures, and in rule development. The book is also an effective educational aid in naval architecture, marine, civil and mechanical engineering. Prof. Weicheng Cui is the Dean of Hadal Science and Technology Research Center of Shanghai Ocean University, China. Dr. Xiaoping Huang is an associate professor of School of Naval Architecture, Ocean and Civil Engineering of Shanghai Jiao Tong University, China. Dr. Fang Wang is an associate professor of Hadal Science and Technology Research Center of Shanghai Ocean

This book is only possible through the will of God. The inspirational messages given to us at times are very evident in this story and are meant for all. God can and will work through anyone whose heart is open and whose mind is still enough to hear that gentle voice speak to them. It is then that we realize how much our heavenly Father loves each one of us and wants us all to have a close relationship with Him. My name is Elisabeth, and this is my journey with the Lord. I was given this opportunity to share a part of my life with you. Alma, my sister, is truly blessed and has accompanied me through this journey. Some of the pictures and most of the inspirational messages associated with the pictures were given to Alma for us to use in this book. The pictures are all a gift from God. For this we humbly thank Him and our Blessed Mother, for allowing us to be a part of God's plan.

Nwcg Standards for Interagency Incident Business Management

A comprehensive textbook that encompasses the full range of material covered in undergraduate courses in Structures in departments of Civil and Mechanical Engineering. The approach taken aims to integrate a qualitative approach - looking at the physical reality of phenomena - with a quantitative approach - one that models the physical reality mathematically. An innovative introductory chapter looks at different types of structures - from the commonplace, such as chairs and aeroplanes, and the historically significant, such as the Pont du Gard in southern France, through to modern and novel structures such as the Bank of China building in Hong Kong - with a view to enthusing the reader into further study.

This book aims to offer a thorough study and reference textbook on electrical machines and drives. The basic idea is to start from the pure electromagnetic principles to derive the equivalent circuits and steady-state equations of the most common electrical machines (in the first parts). Although the book mainly concentrates on rotating field machines, the first two chapters are devoted to transformers and DC commutator machines. The chapter on transformers is included as an introduction to induction and synchronous machines, their electromagnetics and equivalent circuits. Chapters three and four offer an in-depth study of induction and synchronous machines, respectively. Starting from their electromagnetics, steady-state equations and equivalent circuits are derived, from which their basic properties can be deduced. The second part discusses the main power-electronic supplies for electrical drives, for example rectifiers, choppers, cycloconverters and inverters. Much attention is paid to PWM techniques for inverters and the resulting harmonic content in the output waveform. In the third part, electrical drives are discussed, combining the traditional (rotating field and DC commutator) electrical machines treated in the first part and the power electronics of part two. Field orientation of induction and synchronous machines are discussed in detail, as well as direct torque control. In addition, also switched reluctance machines and stepping motors are discussed in the last chapters. Finally, part 4 is devoted to the dynamics of traditional electrical machines. Also for the dynamics of induction and synchronous machine drives, the electromagnetics are used as the starting point to derive the dynamic models. Throughout part 4, much attention is paid to the derivation of analytical models. But, of course, the basic dynamic properties and probable causes of instability of induction and synchronous machine drives are discussed in detail as well, with the derived models for stability in the small as starting point. In addition to the study of the stability in the small, a chapter is devoted to large-scale dynamics as well (e.g. sudden short-circuit of

synchronous machines). The textbook is used as the course text for the Bachelor's and Master's programme in electrical and mechanical engineering at the Faculty of Engineering and Architecture of Ghent University. Parts 1 and 2 are taught in the basic course 'Fundamentals of Electric Drives' in the third bachelor. Part 3 is used for the course 'Controlled Electrical Drives' in the first master, while Part 4 is used in the specialised master on electrical energy.

The National Wildfire Coordinating Group provides national leadership to enable interoperable wildland fire operations among federal, state, local, tribal, and territorial partners. Primary objectives include: Establish national interagency wildland fire operations standards; Recognize that the decision to adopt standards is made independently by the NWCG members and communicated through their respective directives systems; Establish wildland fire position standards, qualifications requirements, and performance support capabilities (e.g. training courses, job aids) that enable implementation of NWCG standards; Support the National Cohesive Wildland Fire Management Strategy goals: to restore and maintain resilient landscapes; create fire adapted communities; and respond to wildfires safely and effectively; Establish information technology (IT) capability requirements for wildland fire; and Ensure that all NWCG activities

contribute to safe, effective, and coordinated national interagency wildland fire operations. The "NWCG Standards for Interagency Incident Business Management" assists participating agencies of the NWCG to constructively work together to provide effective execution of each agency's incident business management program by establishing procedures for: - Uniform application of regulations on the use of human resources, including classification, payroll, commissary, injury compensation, and travel. - Acquisition of necessary equipment and supplies from appropriate sources in accordance with applicable procurement regulations. - Management and tracking of government property. - Financial coordination with the jurisdictional agency and maintenance of finance, property, procurement, and personnel records, and forms. - Use and coordination of incident business management functions as they relate to sharing of resources among federal, state, and local agencies, including the military. - Documentation and reporting of claims. - Documentation of costs and cost management practices. - Administrative processes for all-hazards incidents.

Scala for Java Developers

In Learning with Information Systems the author takes the developing world as the context and through a series of case studies develops a commonly used systems analysis methodology. He demonstrates how this methodology can evolve and adapt as new ideas become prominent. Issues of sustainability of information systems, participation in systems design and user ownership of systems are all examined. This book does not attempt to be prescriptive for all contexts nor does it focus on any particular technology. It addresses the essential questions and promises practical approaches which will help in the avoidance of the worst forms of disaster associated with the planning of information systems for developing countries.

The Diary and Will of Elias Ashmole

The post-9/11 world has witnessed a rebirth of irregular and asymmetrical warfare, which, in turn, has led to an increase in conflicts between conventional armies and non-state armed groups. In their haste to respond to the threat from insurgencies, nations often fail to plan effectively not only for combat operations but also for withdrawal, which is inevitable, win or lose. In order to answer the question of how to withdraw from engagement with an insurgency, Gleis

examines how insurgencies are conducted and what, if anything, is unique about an Islamist insurgency. He then proposes ways to combat these groups successfully and to disentangle one's military forces from the war once strategic objectives have been met--or once it is clear that they cannot be. Because this type of warfare is dynamic and ever-changing, this book is not meant to suggest a set of cookie-cutter solutions for how to withdraw from insurgencies. Rather, the author analyzes six counterinsurgency operations that have taken place in the past, with the intention of gleaning from them as many lessons as possible to better prepare for future withdrawals.The literature on how wars end has failed to explore irregular warfare.This much needed reexamination serves as an indispensable starting point.
