The International Management of Whales, Dolphins and Porpoises

This dynamic casebook takes an interdisciplinary approach in an analytical framework that can be applied to any international environmental legal problem. By studying both legal and non-legal issues, students gain a full and meaningful understanding of this global problem and its legal solutions.

International Environmental Law and Policy is the perfect vehicle for tackling the challenges of international environmental law from a global perspective. International Environmental Law and Policy leads students from fundamental issues to sophisticated applications in four main parts: the Nature of International Environmental Issues - Basic Concepts and Context explores non-legal issues such as: global population; intergenerational equity; risk assessments; the tension between industrialized and developing countries; And The underpinning legal issues of public international law and international institutions: Pollution Control offers a detailed analysis of the 'precautionary principle,' the right to a clean environment, general norms applicable to environmental agencies, general principles of international responsibility for environmental harm, and environmental warfare. Natural Resource Management presents detailed discussions of the 'Harmon Doctrine,' the World Heritage Convention, options for conserving biological diversity, The Convention on International Trade in Endangered Species (CITES), And The protection of whales and other species Trade and Finance delves into dispute

International Regulation of Underwater Sound

Throughout history many nations have had to make hard choices between a land and a maritime strategy. This study covers the history of such choices, beginning with the Persian invasion of Greece in 490BC and ending with the many and various choices facing the Western world in the aftermath of the Cold War. If many wars of the past are now seen as the outcome of maritime/land strategies, the lessons learned from them and discussed in this book can provide some answers to those who have to consider wars of the future.

Principles of Abundance for the Cosmic Citizen translates the principles of quantum physics into practical tools that we can use to transform ourselves and our communities. Dr. Riddle brings together insights from physics, cosmology, biology, economics, psychology, and metaphysics to confirm our cosmic interconnectedness and our basic motivation to cooperate rather than to compete. She weaves a compelling portrayal of ourselves as part of an ever-evolving and abundant (though not unlimited) universe.

Quotas have been used in international environmental agreements for at least a century and, in tandem with incentive approaches, should continue to be crucial to realizing a sustainable environment.

This text is a critical examination of quotas both as regulatory tools and as products of negotiation. It reviews the main features of environmental problems, the regulatory options and criteria used to judge them, and the various ways of explaining negotiated outcomes. Quotas in the management of fisheries, other resources, freshwater and marine pollution, and air pollution are also described. Selected examples are considered in detail to provide an understanding of how quotas were developed in scientific, political, economic and social context. An assessment of the key features of quotas in practice leads to the identification of an emerging approach, the negotiation of constrained local quotas. The approach is a practical way to balance efficiency and fairness in complex negotiations, without sacrificing environmental effectiveness.

Principles of Abundance for the Cosmic Citizen

In a world where we usually measure animals by human standards, prize-winning author and MacArthur Fellow Carl Safina takes us inside their lives and minds, witnessing their profound capacity for perception, thought and emotion, showing why the word "it" is often inappropriate as we discover who they really are. Weaving decades of observations of actual families of free-living creatures with new discoveries about brain functioning, Carl Safina's narrative breaches many commonly held boundaries between humans and other animals. In *Beyond Words*, readers travel the wilds of Africa to visit some of the

last great elephant gatherings, then follow wolves of Yellowstone National Park sort out the aftermath of their personal tragedy, then plunge into the astonishingly peaceful society of killer whales living in waters of the Pacific Northwest. We spend quality time, too, with dogs and falcons and ravens; and consider how the human mind originated. In his wise and passionate new book, Safina delivers a graceful examination of how animals truly think and feel, which calls to question what really does—and what should—make us human.

C.O.OKIDI I welcome the opportunity to prepare a Foreword to the book on Environmental Policy and Law in Africa, edited by Kevin R. Gray and Beatrice Chaytor. It is a pleasure to do that because the book is a contribution to the cause of capacity building for development and implementation of environmental law in Africa, a goal towards which I have had an

undivided focus over the last two decades. There is still some belief in and outside Africa that for developing countries in general, and Africa in particular, development and implementation of environmental law is not a priority. This belief prevails strongly in many quarters of the industrialised countries. In fact, the view is held either out of blatant ignorance or by some renegade industrialists who fail to appreciate Michael Royston's 1979 thesis that Pollution Prevention Pays.² That group, for obvious reasons, must have their correspondent counterparts in Africa to provide hope that industries rejected as derelict in the West or inoperable due to rigorous environmental regulation, can find homes to which they can escape and dump their polluting industries.

Beyond Words

Whales and elephants are iconic giants of the marine and terrestrial animal world. Both are conspicuous representatives of wildlife conservation. The issues of whaling and the ivory trade are closely linked, both legally and politically, in many ways; some obvious, and some surprising. The treatment of both whales and elephants will be politically and legally contentious for years to come, and is of great significance to conservation in general. This book examines the current state of international environmental law and wildlife conservation through a comparative analysis of the treatment of whales and elephants. In particular, it describes the separate histories of international governance of both whales and elephants, presenting the various treaties

through which conservation has been implemented. It is shown that international environmental law is influenced and shaped by important political actors – many with opposing views on how best conservation, and sustainable development, principles are to be implemented. Modern environmental treaties are changing as weaknesses and loopholes are exposed in older, and possibly outdated, treaties such as the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) and the International Convention for the Regulation of Whaling (ICRW). Such weaknesses can be seen in the efforts made by some states to circumvent or weaken CITES and the International Whaling Commission and to resume commercial whaling, and further in the efforts of countries to resume trade in ivory. The argument is made that the Convention on Biological Diversity could be used to begin reconciling opposed views and to focus conservation efforts. The argument is made that effective conservation of species cannot be achieved through individual treaties, but only through a synergistic approach involving multilateral environmental agreements – 'ecosystems of legal instruments'.

logical analysis and industry continues to grow in scope and importance. AI has become integral to the effective functioning of much of the technical infrastructure we all now take for granted as part of our daily lives. This book presents the papers from the 21st biennial European Conference on Artificial Intelligence, ECAI 2014, held in Prague, Czech Republic, in August 2014. The ECAI conference remains Europe's principal opportunity for researchers and practitioners of Artificial Intelligence to gather and to discuss the latest trends and challenges in all subfields of AI, as well as to demonstrate innovative applications and uses of advanced AI technology. Included here are the 158 long papers and 94 short papers selected for presentation at the conference. Many of the papers cover the fields of knowledge representation, reasoning and logic as well as agent-based and multi-agent systems, machine learning, and data mining. The proceedings of PAIS 2014 and the PAIS System Demonstrations are also included in this volume, which will be of interest to all those wishing to keep abreast of the latest developments in the field of AI.

As a child in South Africa, spending summers exploring the wild with his boyhood friends, Lyall Watson came face to face with his first elephant. From that moment on, Watson's fascination grew into a lifelong obsession with understanding the nature and behaviour of this impressive creature. Around the world, the elephant - at once a symbol of spiritual power and physical endurance - has been worshipped as a god and hunted for sport. In this captivating portrait of the elephant, Watson draws from scientific research, anthropological studies, and personal experience to document the animal's wide-ranging capabilities to remember and to mourn; and he reminds us of its rich mythic origins, its evolution, and its devastation in recent history. Part meditation on an elusive animal, part evocation of the power of place, *Elephantoms* presents an alluring mix of the mysteries of nature and the wonders of childhood.

"This nonfiction book about whales in the Pacific Ocean is written by Leigh Calvez. Calvez has worked with whales and dolphins as a scientist, naturalist, and nature writer. As a scientist, she was Research Director for the Ocean Mammal Institute on such projects as the effect of vessel traffic on endangered humpback whales off Maui, Hawaii. She also led the only independent research team observing the US Navy's testing of Low Frequency Active Sonar on humpback whales in their nurseries in Hawaii in 1998"

Elephants and Whales

The East

This text examines issues surrounding the management and conservation of a particular category of animal, namely the megafauna, or the largest of the land and sea mammals. The value accorded to different biotic resources varies significantly depending upon the interests and goals of the parties undertaking the valuation, and these different perceptions often come to influence management of these species. Discussion and programmes directed toward saving elephants and whales are particularly instructive in this regard, as these species appeal to diverse groups for markedly different reasons.

whaling factions and can easily be appropriated as the common heritage of humankind. This book, the first of its kind, is therefore not about whales and whaling per se but about how people communicate about whales and whaling. It contributes to a better understanding and discussion of controversial environmental issues: Why and how are issues selected? How is knowledge on these issues produced and distributed by organizations and activists? And why do affluent countries like Japan and Norway still support whaling, which is of insignificant economic importance? Basing his analysis on fieldwork in Japan and Norway and at the International Whaling Commission, the author argues how an image of a "superwhale" has been constructed and how this image has replaced meat and oil as the important whale commodity. He concludes that the whaling issue provides an arena where NGOs and authorities on each side can unite, swapping political legitimacy and building personal relations that can be useful on issues where relations are less harmonious.
