Formerly titled Quality Control, the field's most accessible introduction to quality has been renamed and revamped to focus on quantitative aspects of quality improvement. New chapters on Lean Enterprise, Six Sigma, Experimental Design, and Taguchi's Quality Engineering have been added, and this new Ninth Edition adds comprehensive coverage of fundamental statistical quality improvement concepts. A practical state-of-the-art approach is stressed throughout, and sufficient theory is presented to ensure that students develop a solid understanding of basic quality principles. To improve accessibility, probability and statistical techniques are presented through simpler math or developed via tables and charts. As with previous editions, this text is written to serve a widely diverse audience of students, including the growing number of "math shy" individuals who must play key roles in quality improvement.

### **The Self Beyond Itself**

Boncrack is a classic novel from Dick Francis, one of the greatest thriller writers of all time. At midnight Neil Griffon's home is broken into and he is abducted by masked men. When he wakes up, hours later, Neil discovers that 'unless he cooperates' his kidnappers will destroy his father's racing stable, his precious horses and even Neil himself. Returning to the stables, Neil can tell no one about his ordeal, or his kidnappers' threats of violence if he does not comply with their demands. Trapped, Neil refuses to surrender - and devises an ingenious scheme to beat his kidnappers at their own game. Packed with intrigue and hair-raising suspense, Boncrack is just one of the many blockbuster thrillers from legendary crime writer Dick Francis. Other novels include the huge bestsellers Dead Heat, Under Orders and Silks. The Dick Francis legacy continues through his son Felix Francis: Refusal is his latest novel, following Bloodline and Gamble. Praise for the Dick Francis novels: 'The narrative is brisk and gripping and the background researched with care . . . the entire story is a pleasure to relish' Scotsman 'Dick

Francis's fiction has a secret ingredient - his inimitable knack of grabbing the reader's attention on page one and holding it tight until the very end' Sunday Telegraph 'Still the master' Racing Post 'The master of suspense and intrigue' Country Life Dick Francis was one of the most successful post-war National Hunt jockeys. The winner of over 350 races, he was champion jockey in 1953/1954 and rode for HM Queen Elizabeth, the Queen Mother, most famously on Devon Loch in the 1956 Grand National. On his retirement from the saddle, he published his autobiography, *The Sport of Queens*, before going on to write forty-three bestselling novels, a volume of short stories (*Field of 13*), and the biography of Lester Piggott. Dick Francis died in February, 2010, at the age of 89, but he remains one of the greatest thriller writers of all time.

Full coverage of ETF investments from an expert in the field The initial edition of Gary Gastineau's *The Exchange-Traded Fund Manual* was one of the first books to describe and analyze ETFs. It made the case for the superiority of the structure of investor-friendly ETFs over mutual funds and helped investors select better funds among the ETFs available. With this new edition, Gastineau provides comprehensive information on the latest developments in ETF structures, new portfolio variety, and new trading methods. With a realistic evaluation of today's indexes, Gastineau offers insights on actively managed ETFs, improved index funds, and fund and advisor selection. Discusses how to incorporate ETFs into an investment plan Offers updated coverage of new ETFs, including full-function actively managed ETFs, and a valuable chapter on trading ETFs Written by the leading authority on exchange traded funds Exchange-traded funds offer you diversification and participation in markets and investment strategies that have not been available to most investors. If you want to understand how to use ETFs effectively, the Second Edition of *The Exchanged-Traded Fund Manual* can show you how.

*Marine Auxiliary Machinery, Seventh Edition* is a 16-chapter text that covers the significant advances in marine auxiliary machinery relevant to the certification of competency examinations. The introductory chapters deal with the basic components of marine machineries, such as propulsion system, heat exchanger, valves, and pipelines. The succeeding chapters describe the pumps and pumping system, specifically the tanker and gas carrier cargo pumps. Considerable chapters are devoted to the operation of machinery's major components, including the propeller shaft, steering gear, auxiliary power, bow thrusters, and stabilizers. Other chapters consider the refrigeration, heating, ventilation, and air conditioning systems. The final chapters tackle the safety system of marine auxiliary machinery, particularly the fire protection, safety, instrumentation, and control systems. This book will prove useful to marine and mechanical engineers.

Illegitimate Polly Brandon has never felt like more than an ugly duckling. So she's

amazed when Hugh Philippe Junot pays her such close attention as they sail for Portugal. Under ordinary circumstances she knows this distinguished lieutenant colonel of marines would never have looked at her, but having his protection for the journey is comforting—and something more that she's afraid to give a name to. Should she trust what she sees in Hugh's eyes—has she turned from an ugly duckling into a beautiful, desirable swan?

## **The New Rules of Posture**

Written at a level suitable for senior students of marine engineering and entry-level marine engineers, this book covers main propulsion machineries, auxiliaries, and all ship-board systems and equipments that come under the purview of a marine engineer. The chapters progress from working principles to construction and design features to operation and maintenance. A separate chapter covers inherent hazards in a running engine and the built-in safety features and fail-safe devices designed to combat them. Copious line drawings and composite diagrams demonstrate the concepts and intricacies of design. A special feature is the section on watch-keeping.

There are over 2000 registered historic buildings in Shanghai, with hundreds more waiting to be added. Most are pre-War structures and are either Western buildings, or Chinese-style buildings with a distinct Western influence. These include villas, offices, apartment buildings and shikumen (a house of both wood and brick). Structures were selected for this book because of the interesting stories behind them or because they were related to a topical news event.

“Intertwines history, philosophy, and science . . . A powerful challenge to conventional notions of individual responsibility” (Publishers Weekly). Few concepts are more unshakable in our culture than free will, the idea that individuals are fundamentally in control of the decisions they make, good or bad. And yet the latest research about how the brain functions seems to point in the opposite direction . . . In a work of breathtaking intellectual sweep and erudition, Heidi M. Ravven offers a riveting and accessible review of cutting-edge neuroscientific research into the brain’s capacity for decision-making—from “mirror” neurons and “self-mapping” to surprising new understandings of group psychology. The Self Beyond Itself also introduces readers to a rich, alternative philosophical tradition of ethics, rooted in the writing of Baruch Spinoza, that finds uncanny confirmation in modern science. Illustrating the results of today’s research with real-life examples, taking readers from elementary school classrooms to Nazi concentration camps, Ravven demonstrates that it is possible to build a theory of ethics that doesn’t rely on free will yet still holds both individuals and groups responsible for the decisions that help create a good society. The Self Beyond Itself is that rare book that injects new ideas into an old debate—and “an important contribution to the development of our thinking about morality” (Washington Independent Review of Books). “An intellectual hand-grenade . . . A magisterial survey of how contemporary neuroscience supports a vision of human morality which puts it squarely on the same plane as other natural phenomena.” —William D. Casebeer, author of Natural Ethical Facts

In recent years adaptation studies has established itself as a discipline in its own right, separate from translation studies. The bulk of its activity to date has been restricted to literature and film departments, focussing on questions of textual transfer and adaptation of text to film. It is however, much more interdisciplinary, and is not simply a case of transferring content from one medium to another. This collection furthers the research into exactly what the act of adaptation involves and whether it differs from other acts of textual rewriting. In addition, the 'cultural turn' in translation studies has prompted many scholars to consider adaptation as a form of inter-semiotic translation. But what does this mean, and how can we best theorize it? What are the semiotic systems that underlie translation and adaptation? Containing theoretical chapters and personal accounts of actual adaptations and translations, this is an original contribution to translation and adaptation studies which will appeal to researchers and graduate students.

Modelling and Control of Mini-Flying Machines is an exposition of models developed to assist in the motion control of various types of mini-aircraft: • Planar Vertical Take-off and Landing aircraft; • helicopters; • quadrotor mini-rotorcraft; • other fixed-wing aircraft; • blimps. For each of these it propounds: • detailed models derived from Euler-Lagrange methods; • appropriate nonlinear control strategies and convergence properties; • real-time experimental comparisons of the performance of control algorithms; • review of the principal sensors, on-board electronics, real-time architecture and communications systems for mini-flying

machine control, including discussion of their performance; • detailed explanation of the use of the Kalman filter to flying machine localization. To researchers and students in nonlinear control and its applications Modelling and Control of Mini-Flying Machines provides valuable insights to the application of real-time nonlinear techniques in an always challenging area.

Jiji's extensive understanding of how students think and learn, what they find difficult, and which elements need to be stressed is integrated in this work. He employs an organization and methodology derived from his experience and presents the material in an easy to follow form, using graphical illustrations and examples for maximum effect. The second, enlarged edition provides the reader with a thorough introduction to external turbulent flows, written by Glen Thorncraft. Additional highlights of note: Illustrative examples are used to demonstrate the application of principles and the construction of solutions, solutions follow an orderly approach used in all examples, systematic problem-solving methodology emphasizes logical thinking, assumptions, approximations, application of principles and verification of results. Chapter summaries help students review the material. Guidelines for solving each problem can be selectively given to students.

Written with the absolute beginner in mind, this engaging book teaches all the basics for learning to crochet with step-by-step instructions and photographs. Crocheting skills are learned by working on projects, beginning with something very easy and getting progressively more difficult as the reader works through the book. New skills are explored in depth as they are introduced. The introductory section covers all the basics of crochet-selecting yarn, hook types and sizes, other tools and accessories, crochet gauge, chaining, forming the basic stitches, reading patterns-making this the most comprehensive beginner's book available. The online video tutorials created to supplement this book are an additional learning tool demonstrating the essential techniques used in crochet.

The diesel engine is by far the most popular powerplant for boats of all sizes, both power and sail. With the right care and maintenance it is twice as reliable as the petrol engine as it has no electrical ignition system, which in the marine environment can suffer from the effects of damp surroundings. Self-sufficiency at sea and the ability to solve minor engine problems without having to alert the lifeboat is an essential part of good seamanship. Marine Diesel Engines, explains through diagrams and stage-by-stage photographs everything a boat owner needs to know to keep their boat's engine in good order; how to rectify simple faults and how to save a great deal of money on annual service charges. Unlike a workshop manual that explains no more than how to perform certain tasks, this book offers a detailed, step-by-step guide to essential maintenance procedures whilst explaining exactly why each job is required.

A manual for understanding the anatomical and emotional components of posture in order to heal chronic pain • Contains self-help exercises and ergonomics information to help correct unhealthy movement patterns • Teaches how to adopt suitable posture in the modern sedentary world Many people cause their own back and body pain through their everyday bad postural and movement habits. Many sense that their poor posture is probably the root of the problem, but they are unable to change long-standing habits. In The New Rules of Posture, Mary Bond approaches postural changes from the inside out. She explains that healthy posture comes from a new sense we can learn to feel, not by training our muscles

into an ideal shape. Drawing from 35 years of helping people improve their bodies, she shows how habitual movement patterns and emotional factors lead to unhealthy posture. She contends that posture is the physical action we take to orient ourselves in relation to situations, emotions, and people; in order to improve our posture, we need to examine both our physical postural traits and the self-expression that underlies the way we sit, stand, and move. The way we walk, she says, is our body's signature. Bond identifies the key anatomical features that impact alignment, particularly in light of our modern sedentary lives, and proposes six zones that help create postural changes: the pelvic floor, the breathing muscles, the abdomen, the hands, the feet, and the head. She offers self-help exercises that enable healthy function in each zone as well as information on basic ergonomics and case histories to inspire us to think about our own habitual movements. This book is a resource for Pilates, yoga, and dance instructors as well as healthcare professionals in educating people about postural self-care so they can relieve chronic pain and enjoy all life activities with greater ease.

Hand Spun contains a collection of never-before-published spinning techniques along with interesting, creative, hip projects. The essential momentum behind this book is to satisfy fans of the author's first two books in their desire for new materials to learn. As Intertwined becomes more well-known, these handspun styles are flooding the internet craft community. Hand Spun offers fresh, new, and exciting material for these spinners to move on to. Where Handspun Revolution, the author's first book, was the spark that ignited the genre of Art-yarn, and Intertwined is considered the bible of creative spinning, Handspun builds upon the now common knowledge of novelty spinning, digging deeper into the traditional underbelly of spinning, not as a means to teach traditional techniques, but rather as a way of turning very traditional forms inside out: Using time-tested techniques to deliver cutting-edge forms. This book also covers fiber-preparation processes, from scouring raw fleece to several carding techniques.
